

# MEADOWSLEA ANGUS BULL SALE

**JUNE 12<sup>th</sup> 2024 – 3PM**

**ON-FARM**

Mt Cook Road, Fairlie, and

**ONLINE** at [www.meadowslea.co.nz](http://www.meadowslea.co.nz)

**MEADOWSLEA  
ANGUS & SHEEP GENETICS**

**NEW DATE AND TIME**

*The South Island hill country where Meadowslea stud cows run*

**OFFERING: 73 HILL-BRED  
R2-YEAR BULLS**

# FERTILITY AND MATERNAL TRAITS the key to profitability in any herd!

**M**eadowslea stud cows winter on unimproved native tussock blocks without supplements being fed. This challenging environment tests the ability of the pregnant cow to maintain condition through periods of winter feed shortages. It is the energy stored in her rib fat levels that enable her to survive, thrive, and ultimately get back in calf and rebreed each year.

**D**ays to calving is a crucial fertility trait that measures the number of days from when the bull is let into the mob until the cow calves. This identifies cow families that calve early every year. Those earlier calves will always be heavier at weaning, and selecting for short Days to Calving will reduce later born calves and allow higher conception rates in a shorter mating period.

**"At Meadowslea we have always had some of the highest rib fat levels in the Angus breed. The importance of these fat levels is now recognised with our cattle now having some of the shortest days to calving EBVs in Australasia."**

*David Giddings*

## GOOD FAT COVER AND EASY-DOING ABILITY

Meadowslea stud 18mth in-calf heifers showing good fat coverings and ready to winter on the hill.

Meadowslea cows and calves come down off the hill for weaning.

**A** cow's condition and her ability to lay down fat in times of surplus, and to draw on that fat as an energy source in times of feed deficit is vitally important. This rib and rump fat is the cheapest and most efficient energy store on the farm, and will determine the ability of the herd to get back in-calf and rebreed early after a hard winter or difficult spring.

**A**ll Meadowslea yearling heifers are mated and any dries culled. After calving these heifers are run in mating mobs together with mixed age cows and expected to get back in calf early, rear a good calf off the tussock, and stay in good order. This is a tough ask for a first-calver, but this year that age-group scanned with a terrific 97% back in-calf rate!

**A cow going into winter with good fat coverings carries an energy store on her back equivalent to approximately 2 bales of baleage.**

**The Meadowslea herd has natural rib and rump fat levels amongst the highest in the breed in Australasia – acknowledged as a key trait for fertility in the harsh environment.**

# Meadowslea 2024 Bull Sale

## ON-LINE AND ON-FARM

State Highway 8, 23 Trotters Road, Fairlie  
5km west of Fairlie

## ON-LINE BIDDING OPENS

with video release on  
Friday 7<sup>th</sup> June - 7pm  
[www.meadowslea.co.nz](http://www.meadowslea.co.nz)

## Paddock Inspection Invited at Anytime

Call David Giddings ph: 027 229 9760

## HELMSMAN STYLE AUCTION

Wednesday 12<sup>th</sup> June - 3.00pm

## Sale Format

The sale will be conducted as a Helmsman-style auction, meaning that all lots are for sale simultaneously. This is to allow for the participation of those in attendance, as well as those online. The sale will be hosted on our own **yourbid** platform and accessed through our website [www.meadowslea.co.nz](http://www.meadowslea.co.nz). Prior to the sale, all lots will be filmed and available for viewing up until sale day on the Meadowslea website.

**Bulls are available for viewing in the paddock anytime** – just call 0272299760 to arrange a time.

**Registration for those in attendance** will be at the on-farm office, where a copy of the conditions of sale will be posted.

**Registration for those online** will be through the Meadowslea website, where the conditions of sale will also be available.

**Buyers** will receive a buyer number as they register which will accompany each bid. Buyers registering online will receive a buyer number in their email which will automatically accompany each bid they place, whether they do so at home on their computer, or through their smart phone while in attendance. Those in attendance may also bid by writing on the supplied bidding cards and handing them in to the auctioneers. All live bids and all lots will be visible at all times, both online and on a big screen on-farm.

**Online registration is available NOW** and we encourage everyone to visit our website [www.meadowslea.co.nz](http://www.meadowslea.co.nz), to register, and then place practice bids on the demonstration lots on the auction page.

**The Online Open Day videos** will be released on our website and on Facebook on Friday 7th June at 7pm. This video will include footage of every bull in the catalogue with expert comments and will be available for viewing right up until the sale.

**Online bidding** will be open from 7pm on Friday 7th June until the conclusion of the sale.

**On Sale Day**, June 12th, the on-farm registration and bidding will open at 1pm.

**Livestreaming with interactive viewing** will commence at 2.45pm with a walk through of all the pens with commentary from the vendors and genetic specialists. Requests to review particular cattle can be made through the comments section of the web-site chat room or by telephone or text to the vendors or stock agents in attendance. This will continue throughout until the conclusion of the sale.

A **live screen on the website** will show all lots alongside their current prices and the buyer number of the bidder who holds that lot. On-farm attendees will be able to view on a big screen on site. Bids will be displayed on a computer or smart phone screen in the following colours

### Example:

**\$2500** displayed in red denotes the vendor's reserve and indicates there has been no bid

**\$3000** displayed in blue means an active bid has been received

**\$3500** orange highlight indicates a new bid has been received within the last 2 minutes on this lot

**\$3500** the holder of the leading bid will have the lot number highlighted in green on their computer or their smart phone. The bidding increment will be \$500

**The sale will run until 4pm on June 12th.** After this time the sale will conclude once there has been a period of at least 2 minutes without a bid being received on any lot. If another bid is placed on any lot during the 2-minute period, then time is extended and bids can be received on all lots for a further 2 minutes. This process will be repeated until a clear 2 minutes passes without any bids on any lot at which time the sale will conclude.

**Final Time** will be called clearly by the commentary team who will use their discretion to ensure all bidders are satisfied. All updates will be posted on our website, as will an up-to-date version of this document.

**Rebate purchasing Commission.** PGG Wrightson will be the booking company. Standard 6% rebate commission will be paid to nominated buying companies. All prices are in \$NZD all purchasing companies will be responsible for booking of their own client's purchases. Full terms and conditions are available online at the Meadowslea website.

**Disclaimer:** The BREEDPLAN Estimated Breeding Values (EBVs) contained within this sale catalogue were compiled by the Agricultural Business Research Institute (ABRI) from the data supplied by breeders. Neither Angus NZ nor ABRI oversee or audit the collection of this data.

# FOREWORD

Meadowslea Angus Stud was established in 1985 with the purchase of 6 capital stock heifers from the well-known Turihau Stud north of Gisborne. We have steadily expanded ever since to meet strong demand for bulls from the hill-country market we target – our belief is that an animal must first and foremost be suitable for the environment in which it is run.

With the lease and purchase of neighbouring properties over the last 10 years we have taken the opportunity to increase the stud cow numbers further, and this year mated a total of 751 stud females. The demand for our bulls has steadily increased with 170 bulls sold at auction in 2022. With 274 bull calves born in 2022 the bar has been very high to make the 2024 sale team with over 200 bulls not selected, and we feel this is reflected in the quality of this catalogue.

Selection criteria are for easy fleshing, moderate framed cattle, with plenty of meat and adequate fat cover, that will shift and perform in the South Island hill-country. Sires used are all NZ bred with real emphasis placed on the maternal and fertility traits as well as structural soundness. Over the last 14 years our cows have grazed on Steve and Sue Kerr's neighbouring Berkley Downs property, on native tussock blocks to an altitude of over 2500 feet. Wintering without supplements through adverse conditions has further tested their hardiness and constitution, and clearly shown us the type that suits our country and even more importantly our clients' properties.

As you read this catalogue it will become clear that the animals that perform the best in our environment are of a similar type – strong rib fat levels drive our programme forward for two reasons. Rib fat is strongly linked to fertility, early puberty and the ability to calve early and re-breed early over a lifetime. Secondly, it is the energy store the females use to get through the feed shortages and extended stress periods all too common in this harsh environment. It is significant that the average rib fat EBV of all the bulls on offer is +2.0, ranking them in the top 25% for the breed in Australasia.

Very dry conditions in inland Canterbury through early 2024 have served as a stark reminder of the type of cattle needed to perform in tough environments. At calf sale time it was gratifying to see the lines of weaner calves produced by Meadowslea-bred cows – the old adage that it is the fat on the cows back that determines the weight of her calf has never been truer!

At Meadowslea all yearling heifers are mated. In 2022 we had 260 stud heifers born and we mated almost all as yearlings in 7 different mobs selected on pedigree, performance, and type. The result was a 97% conception rate and is a huge endorsement of the emphasis we place on the key fertility and maternal traits that are the main drivers of profitability in any beef herd. The performance of our young genetics is again leading the progress within the herd, with over 35% of the bulls in this catalogue either sired by yearling bulls or out of 2-year heifers.

The key fertility trait of Days to Calving measures how soon cows calve after the bull is introduced, with shorter values reflecting a higher likelihood of being in-calf in the first cycle. The bulls in this catalogue average -5.2 days, which is in the top 20% of the breed as well. The other important maternal traits of calving ease, scrotal size, and milk are also generally at very high levels throughout the catalogue. High-growth females do not work well in our hill-country environment and over time they have failed to perform and so have dropped out of the herd. Consequently, bulls with excessive high growth do not feature in this catalogue.

Our proven senior sires, Turihau Crump, Meadowslea F540, and Meat Machine G914, were all breed trait leaders for the fertility traits of calving ease, or short days to calving, and the mixes of these bloodlines within the bulls in this catalogue offer very exciting options for improving profitability in our clients' herds. This year we have some exciting new bloodlines coming through with our 2022 purchases Rangatira Rebel, Turihau Jupiter, and Turihau Tornado having big impacts, as well as our highly rated keeper bulls from that season Q250 and Q178.

Meadowslea clients also find these moderate-framed, early-maturing, easy-doing cattle prime up quickly, so are easily finished and grade to meet the very attractive market premiums now available for prime Angus beef. This has come as no real surprise as the type cattle we strive for always prime up quickly and lay down marbling.

With a total of 21 pieces of data now presented in catalogues, this can be a bewildering array of numbers for most commercial farmers and indeed stud breeders. We encourage clients to look primarily at the Self-Replacing Index in the first instance. We have found this to be a very useful tool for distilling this array of figures into a useful framework that reflects genuine profitability in NZ hill country conditions, and it is the primary metric we use for selecting and comparing cattle ourselves.

# FOREWORD CONTINUED

Meadowslea retain semen rights on all bulls unless by arrangement.

All bulls on offer will undergo Beef Class Structural Assessment inspection and the scores for the individual lots will be published online and be available in hard copy on sale day.

All Meadowslea bulls come with a 3-year guarantee, and we stand behind them 100%.

Bulls are available for viewing any-time pre-sale – just call 027 229 9760 to make a time that suits.

We look forward to seeing you at Meadowslea, or joining us online, at 3pm on **Wednesday June 12th 2024**.

Regards,

David Giddings

EBV tables in this catalogue represent the top 15% and 30% for each trait except where Mature cow weight is shaded it indicates desirable for under 600 Day weight and exceptional for under 400 Day weight.

74%	41%	59%	57%	60%	59%	56%	57%	

**Comments:** We start our 2024 catalogue with a signature Meadowslea type, displaying all the traits we value so highly for efficient sustainable beef production on hill-country. Used heavily as a yearling, and by the same sire as our 2024 keeper bull, T172 is Incredibly deep, thick, and easy doing with a hindquarter that would be hard to beat anywhere. Tremendous depth through the flank and second thigh. Outstanding NZ pedigree being double-bred to both Braveheart and Hingaia 469. Out of a good young Crump cow who sits at the very top of the breed for short days to calving, rib and rump fats and IMF. T172 ticks all the boxes for heifer or cow mating with exceptional fertility, fats, and moderate efficient cow size that generate an SRI index in the top 5% for the breed.

SELF REPLACING INDEX  
**+\$171**

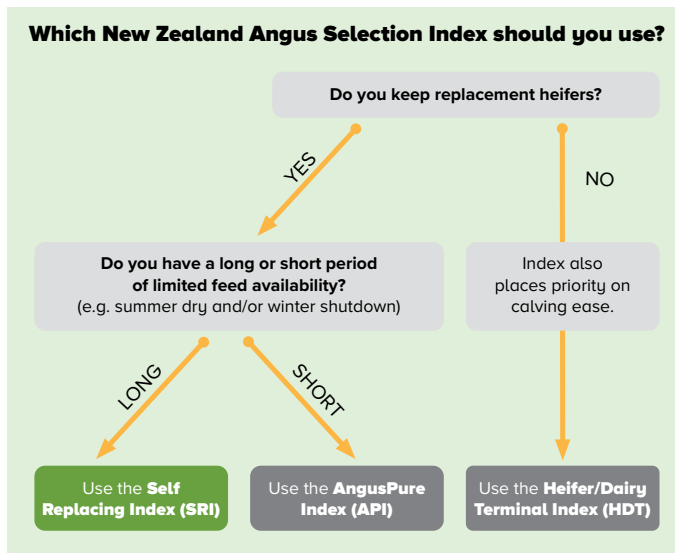

# EBVS EXPLAINED

TransTasman Angus Cattle Evaluation (TACE) EBVs and selection indexes remove the effects of non-genetic factors (e.g. feeding regimes, animal age) from what is seen and measured to provide the best measure of an animal's genetic merit. BREEDPLAN information should always be used in conjunction with other selection criteria, including visual assessment.

## A BEST PRACTICE GUIDE TO SELECTING YOUR NEXT NEW ZEALAND ANGUS SIRE

A TACE Guide to Animal Selection allows you to select the best genetics for your herd in four easy steps:

*If you farm in the South Island, or most of the North Island for that matter, you most likely have a long period with limited feed supply with either winter shutdown, summer dry, or both, and should therefore use the Self Replacing Index.*

1. Consider the individual EBVs of importance.
2. Consider other traits of importance (e.g. visual assessment).
3. Identify the **Angus New Zealand selection** index of most relevance to you.
4. **Rank animals** using the chosen selection index.

The majority of these steps can be undertaken online, allowing you to generate a shortlist of bulls for potential purchase ahead of sale day. The searchable version of this catalogue can be found online here [www.angusnz.com](http://www.angusnz.com).

## TRANSTASMAN ANGUS CATTLE EVALUATION

A TACE Guide to Interpreting EBVs outlines how to assess and compare the genetic merit of animals. Please note that only EBVs from the same TACE analysis can be directly compared. The New Zealand Angus Association publishes the following TACE EBVs:

**Calving Ease Direct (%):** Higher (or more positive) CEDir EBVs indicate that two year old heifers will have less difficulty when calving this sire's progeny.

**Calving Ease Daughters (%):** Higher (or more positive) CEDtr EBVs indicate easier calving of this sire's daughters at two years of age.

**Gestation Length (days):** Bulls with lower (or more negative) GL EBVs are expected to produce progeny with shorter gestation lengths. Such progeny are also expected to be easier calving.

**Birth Weight (kg):** Bulls with lower, less positive BWt EBVs are expected to produce progeny that are lighter at birth, with an associated lower risk of calving difficulty. This EBV is particularly

important when selecting sires where there is an increased risk of calving difficulty (e.g. heifers, cross-breeding).

**200, 400 & 600 Day Weight EBVs (kg):** Bulls with larger (or more positive) Weight EBVs are expected to produce progeny that grow faster to 200, 400 & 600 days of age, respectively. The Weight EBV of particular importance will depend on the target market e.g. vealer (200 D), yearling (400 D) or heavy steer (600 D).

**Mature Cow Weight (kg):** Bulls with larger (or more positive) MCW EBVs are expected to produce daughters with higher mature cow weights and increased feed requirements. More moderate MCW EBVs are generally more favourable in self replacing or maternal production systems.

**Milk (kg):** Bulls with higher (or more positive) Milk EBVs are expected to produce daughters with more maternal ability leading to higher 200 day weights in their progeny. Selection for moderate Milk EBVs may be preferable in harsher environments as cows with higher Milk EBVs can have impaired fertility and decreased survival under such conditions.

**Scrotal Size (cm):** Bulls with larger (or more positive) SS EBVs indicate better semen quality and quantity. Daughters are expected to be more fertile and reach puberty at an earlier age.

**Days to Calving (days):** Bulls with lower (or more negative) DTC EBVs are expected to produce daughters that are more fertile and have a shorter interval from bull-in date to calving.

**Carcase Weight (kg):** Bulls with larger (or more positive) CWt EBVs are expected to produce progeny with heavier carcasse weights.

**Eye Muscle Area (sq. cm):** Bulls with a higher (or more positive) EMA EBV are expected to produce progeny with better muscling.

**Rib and Rump Fat EBVs (mm):** Bulls with higher (or more positive) Rib & Rump Fat EBVs are expected to produce fatter progeny, relative to carcasse weight. The desire for more or less fat will depend on the finishing ability of your animals.

**Retail Beef Yield (%):** Bulls with higher (or more positive) RBY EBVs are expected to produce progeny with higher yielding carcasses.

**Intramuscular Fat (%):** Bulls with higher (or more positive) IMF EBVs are expected to produce progeny with more marbling and better grading scores (e.g. MSA).

**Docility (%):** Bulls with higher (or more positive) DOC EBVs are expected to produce more progeny with acceptable temperament.

## SELECTION INDEXES

The New Zealand Angus Association currently reports three different selection indexes. These are the:

- Self Replacing Index
- AngusPure Index
- Heifer/Dairy Terminal Index

Each selection index is reported in units of net profitability per cow mated (\$), and relates to a commercial herd using Angus bulls. Each selection index is focused on efficient beef production, including maternal traits where appropriate. Scan the QR Code for more detail.

# ONLINE PLATFORM NOW WELL ESTABLISHED

---

Yourbid, the online Helmsman auction system developed by Meadowslea Genetics of Fairlie, celebrated its fourth birthday with the stud's In-Calf Angus Female Sale on May 1st.

Meadowslea hold 7 on-farm sales a year across their sheep and Angus cattle breeding operations, including the annual in-calf sale in early May. In 2020, this date fell within NZ's Level 3 Covid lockdown, during which no crowds or gatherings were permitted, making an outcry auction impossible.

With feed supplies tight and meat processing capacity limited, deferring the sale really wasn't an option either, meaning the only way forward was to hold it online. After looking at the various options available, the Meadowslea team decided to design their own from the ground up.

After running helmsman sales for many years for ram sales and in-lamb ewe sales previously, David and son George Giddings could see how an online helmsman sale would work very well for stud stock. They were able to provide a web-designing friend with a specific brief, and a week or so later Yourbid came into being. The sale was very strong, with spirited bidding from around New Zealand and Australia, despite no buyers being in attendance at all.

Since that first sale in 2020, Meadowslea have run 24 successful sales for their own stock, as well as a number of sales for other stud breeders in NZ and the UK. The system has proven very popular with stud-stock buyers, giving them the extra time to consider their purchases carefully, and the option of buying in choice order rather than lot number order.

As well as that first female sale, Meadowslea runs 2 bull sales, online semen sales, and 3 ram sales on Yourbid annually, and have even sold a house in Wanaka on the platform.

Yourbid has been used very successfully for studstock sales in Scotland, and the Giddings family have received enquiry from breeders keen to use it from around New Zealand as well as in Australia, France, the US and as far afield as Romania.

Several other ram breeding operations have used it in New Zealand this summer, with a number of bull sales confirmed for this season and many more interested in switching to it over the next few years.

The ability to tap into the global market via the internet and social media has hugely increased Meadowslea's exposure, and allowed direct marketing of Angus genetics in particular into Australia, the US, and the global market. Semen and embryo sales across the Tasman have been strong, and in addition Meadowslea has sold bulls and Angus females to Australian buyers, who have subsequently taken semen / embryos across the ditch.

One of the strengths of the system is the ability to work alongside and fully integrate with the existing stock and station industry.

Yourbid works as a Helmsman-style auction - meaning all lots are offered for sale simultaneously. Other online livestock sales platforms in New Zealand use the traditional sequential auction model, whereby each lot is sold one at a time, one after the other. Yourbid uses the "Helmsman" style of auction. This means that all the lots on the sale are open for bidding at the same time, which is helpful for both buyers and sellers, particularly when conducted online.

Bidding is also kept open over a period of several days, rather than the minute or so per lot of a conventional auction.

A key feature of this platform is the bidding screen which shows the current prices of all lots simultaneously. Reserve prices are shown in red for a start, this changes to blue once the first bid is received, and the buyer number of the current leading bidder is displayed. New bids are highlighted in orange for a minute. Buyers who are logged in on their own device see the lots they hold highlighted in green. This gives an instant overview of the auction so anyone can see on which lots the activity and interest is, making it easy to establish their relative market values.

All online models have some level of time delay between when events happen on-site and when they are seen by remote buyers. For a traditional sequential auction a delay of 15-20 seconds can be very significant, when each animal might only be in the ring for 90 seconds or so. By keeping the entire auction open for a longer period of time this problem is mitigated significantly. It also means sales will not be affected significantly by any temporary technological glitches.

## **Giving buyers time**

Selecting seedstock is a major decision for sheep and beef farmers, and one which will have ramifications on their operations for years to come. People need time to gather and process information to make decisions. This is even more important when buying remotely, when information gathering is more difficult and takes time – meaning remote buyers are significantly disadvantaged at an online sequential auction. The Yourbid system gives buyers this extra time, and by integrating the bidding on the website alongside the online catalogue, videos of each lot and a live commentary, this information is readily available to buyers. Rather than turning up on a given day and viewing all the animals in that tight time-frame, buyers can go through the catalogue, view the videos, make selections, and bid at their leisure from home over the period of several days the sale is open.

## **Bidding in order of preference**

Another advantage of a Helmsman-style auction is that it allows buyers to bid on stock in the order of their preference, rather than the catalogue order. For instance, as a buyer you might be interested in lot 8 and lot 12. At a traditional auction, lot 8 comes into the ring and isn't selling for too much, however lot 12 is your first preference so you decide to wait for that animal to come into the ring. Lot 12 comes in, sells for too much money, and you can't go back and bid on lot 8 because that animal is sold. Under the Helmsman system buyers can chop and change throughout the bidding. Meadowslea have analysed the bidding data for the sales they have run, and it is obvious that a lot of buyers will bid on a certain lot to a particular level, then change

to another lot, then perhaps go back to the first, or move onto a third animal they like.

Some buyers bid on as many as 8 different animals to get the one they wanted – in a conventional auction they would have missed out completely or ended up with one that wasn't in their top-10 at all. By running the auction over a longer period, those who missed out on their first choice were able to go back through the videos and catalogue (or back through the pens for those who were actually onsite) and pick another animal they were satisfied with.

#### **Integrating on-farm and online bidding**

Integration of on-farm and on-line bids is crucial to the success of a platform like this. This system works by having large TVs on-farm displaying the bidding screen. Buyers on-site can bid through their smart phones, and those bids are displayed in real time. Some buyers will still prefer to attend on-farm and bid using pieces of paper as per a traditional Helmsman sale – they write their buyer number, their lot number, and the bid price on a piece of paper and hand it in – they are able to enter this directly into the online system so it shows up on-screen in real-time as well.

#### **Engagement with potential buyers**

By providing a live-chat on the platform, potential buyers are able to ask questions, request another closer view or more information about a particular lot, and even send through jokes and one-liners. Online videos and the livestreamed commentary are produced through Facebook Live or similar platforms. All this makes for an engaging and entertaining environment for the buyers.

Yourbid invite enquiry from breeders, stock firms, agents and commercial farmers interested in using the platform, and envisage it becoming a platform able to be used by all industry players.

**Comments:** Recognised as one of NZ's most influential and long-lasting senior sires of recent times. He has over 450 progeny in 21 herds in both NZ and Australia and is a trait leader for the important fertility EBV of short days to caving at -9.8 days. Traditional NZ Angus hill country type with proven industry leading fertility. His grandson Meadowslea Mountain Man was the highest selling 2-year-old bull in NZ in 2022 and sons and grandsons have sold for up to \$85,000 at studs across the country. His daughters are the top breeding females in our herd and are proving exceptionally fertile and productive in our hill country, resulting in him now achieving a self-replacing index in the top 10% for the breed. His descendants make up 50% of the catalogue ensuring industry leading fertility.

**Comments:** F540 continues to have a huge influence in our herd with exceptional longevity to 13 years old. He has been used successfully in many breeding programmes with over 300 progeny in 11 herds across NZ and Australia. Deep, thick, easy-doing sire with exceptional production figures for hill country. He has strong maternal and fertility traits and is a trait leader for both short gestation and milk, while his short days-to-calving, rib and rump fats, and IMF all feature in the top 10% for the breed. His daughters are outstanding in the herd weaning thumping calves while maintaining their condition all year round, a real testament to his easy doing traits. His descendants make up over 30% of the catalogue with the F540 x Crump combination legendary.

**Comments:** There can be no doubt why we named this fellow 'Meat Machine', and he has become another all-time favourite sire. We now have over 180 progeny by him and he is having a huge impact in the herd. He leaves terrific thickness and depth with great hindquarters and passes on the easy-doing ability we value so strongly which shows in his exceptional rib and rump fats that are almost off the scale for the breed. He is a trait leader for calving ease with super low birthweight in an early maturing, moderate frame. We believe he is the true Angus hill-country type and this is endorsed with an SRI index in the top 5% for the breed. He has 20 descendants in the catalogue ensuring consistent thickness, depth, and do-ability.

**YOU NEED THE BEST. TO LOOK AFTER THE BEST.**

When it comes to the transport of stud livestock you can't go past Downlands Deer and Studstock.

During the past 30 years, we have pioneered the way in studstock transportation with purpose built trucks, calm expert livestock handlers, efficient nationwide transport routing and now with visual tracking from pick up to delivery.

**Comments:** P565 was our top keeper bull in 2020. He was a standout as a calf, and with his exceptional depth and thickness he was our first choice to mate over stud heifers as a yearling. He has a top pedigree being a son of the well-known Taimate Lazarus, and out of a top 10-year-old cow G943 who was sold in our 2021 Female Sale to Piko-Burn Angus. P565 has good calving ease, short gestation, moderate birth weight, and very good scrotal EBV in the top 5% for breed. The first of his sons were very impressive in our 2022 and 2023 bull sales including lot 1 in 2022 sold to Red Oak stud for \$19,500, and lot 30 in the 2023 sale sold to Peak Hill Station at \$14,000. He has 6 sons on offer.

**Comments:** P674 was sold in our 2020 Bull Sale for \$18,000 to Dovedale. His full brother N141 was the top price bull sold in the 2019 sale to Waimara Angus at \$22,000 where his grandsons are represented strongly in their 2024 bull sale catalogue. We retained semen in P674, recognising that he was double bred to Braveheart and had inherited his strong EMA. With Meat Machine as the sire of the dam he is bred to be deep, thick, and square and he is certainly passing this on to all his progeny in a very consistent way. 2 top sons on offer and 1 Keeper retained.

SELF REPLACING INDEX **+\$178**

**Comments:** We purchased this Taimate Lazarus son as a yearling for \$9,000 to use in our heifer mating programme. We selected him for his depth of body, strong hindquarter and clean shoulders, and were so impressed with him that he has been used to mate top adult cows as well. His figures fit well with our emphasis on maternal and fertility traits, and he ranks in the top 10% of the breed for calving ease, low birthweight, short days to calving, and moderate cow size. His carcass data shows strong muscle, good rib and rump fats as well as IMF. This combination of performance figures generates a very profitable Self-Replacing Index at the very top of the breed at +\$178. He has two very good sons on offer suitable for mating heifers or cows.

SELF REPLACING INDEX **+\$185**

**Comments:** Purchased at the 2021 Turihaua Bull sale, Jupiter impressed us with his superb structural soundness, scoring almost perfect 5's in the Beefclass scoring system. He is a deep bodied, moderate framed bull with exceptional muscle, and this is supported with an EMA figure of +8.0 which ranks him in the top 5% for NZ. He has the important fertility trait of short days to calving ranking in the top 1% for the breed and the easy doing fats we rate so highly in the hill-country. All this combined with a very moderate mature cow weight generates an incredibly profitable SRI index of \$185, ranking him in the top 1% for the breed in NZ. We love the soundness and muscle on the Jupiter sons and used five as yearlings. We have retained 1 son and the others feature at lots 2,3,17, and 18.

**Comments:** Purchased at the 2021 Turihaua bull sale, Tornado is a lovely moderate framed, wonderfully sound, traditional Turihaua type of bull. He has exceptional structural soundness, and wonderful feet and legs to give longevity of production. He exhibits strong muscle with a deep flank and a very good hind-quarter. We see a lot of similarity to Turihaua Crump in this bull and very much like the look of the first of his 2-year-old sons coming forward for sale. He has five sons on offer.

**Comments:** Q250 was also retained in 2021. He is a son of our high-performing carcass sire M564 and a grandson of both F540 and our record price cow G1000, who was sold in our 2021 Female Sale to Australia. Q250 is a lovely, well-balanced, moderate-framed bull who ticks a lot of boxes for profitable hill country production. He has calving ease with low birthweight and moderate efficient mature cow size. His maternal and fertility traits are very strong with his scrotal size and short days to calving in the top 10%, while the all-important rib fat ranks in the top 1% for the breed. He has inherited the EMA coming through from his record-priced grandmother G1000 and has IMF in the top 10% for the breed. All this performance gives him a very profitable SRI index of \$158 ranking in the top 5% for the breed. A very sound bull with a great pedigree behind him he is achieving strong semen sales to studs in NZ and

**Comments:** Q178 was our top keeper in 2021 and we rate him as one of the best bulls we have ever bred. He is a son of Rangatira 16209 who bred an outstanding line of bulls for us in the 2021 Bull Sale, with sons selling to \$32,000. He displays exceptional depth of body with a powerful head, strong bone, and very good feet. He has a superb hindquarter and wonderful temperament. He has a good balance of figures for hill-country with strong fertility, good scrotal, and short days to calving in the top 10% for the breed. This bull has attracted much interest with strong semen sales to some of the leading studs in NZ as well as sales to Australia and USA. His first son from his yearling mating was sold in our 2023 sale to Turihaua Angus. This year he has a major influence in the sale with 7 very good sons on offer.

**Comments:** Olympic was sold for a NZ record price of \$106,000 at the 2021 Kaharau sale to Tapiri and Elgin Angus Studs. We were fortunate to secure semen for our AI programme. Olympic is a more moderate framed Kaharau Bull that suits our breeding programme with good fertility, fats, and an exceptional hindquarter. His depth through the flank and second thigh is hard to find on a bull with good IMF. He displays all the good traits that Kaharau are known for, with wonderful soundness, perfect feet, and quality head and bone. His temperament is superb, and he is leaving great skin and coat on his progeny with a real presence about them. We have three sons on offer including lot 7 who we used as a yearling and has been a standout from day 1.

**Comments:** R578 was sold at lot 14 in our 2022 Bull Sale to Stu Millar at Peak Hill Station for \$16,000 after being used as a yearling to follow up our AI programme. He has left a terrific line of sons and we have used 4 as yearlings all of which feature well up the catalogue. R578 is a son of the \$32,000 Woodbank 7017 who went back to Braveheart, and on the dam side goes back to the \$100,000 Rangatira 13-38 - so some real horsepower in the pedigree! R578 has powerful growth finishing with a 600 day in the top 10% for the breed. His fertility is strong with a scrotal EBV in the top 5%. His progeny are scanning very strongly for EMA which has pushed up his own EMA from +1.7 to +5.0. Real volume and capacity about this bull and he is leaving super sound feet and leg structure. We will definitely continue to use him in the AI programme in the future.

**Comments:** R818 was the outstanding Meat Machine son from the 2020 calf drop and was sold in our 2022 Bull Sale to Jade Park Angus in Australia for \$23,500. The bull has remained at Meadowslea and we are very fortunate to have been able to use him. He has developed tremendously, and his depth and thickness have impressed all who have seen him. R818 has strong caving ease coming from the Meat Machine bloodline, with short gestation and low birthweight followed by strong growth. He has an incredibly deep wide hindquarter, huge volume, and plenty of capacity. R818 has the exceptional easy doing ability we value so strongly with good rib and rump fats and an efficient moderate cow weight ensuring profitable, sustainable beef production in hill-country. This is reflected in a very profitable SRI index of \$144 ranking in the top 15% for breed. He has 3 sons on offer out of 2-year heifers from his yearling mating.

**Comments:** We start our 2024 catalogue with a signature Meadowslea type, displaying all the traits we value so highly for efficient sustainable beef production on hill-country. Used heavily as a yearling, and by the same sire as our 2024 keeper bull, T172 is Incredibly deep, thick, and easy doing with a hindquarter that would be hard to beat anywhere. Tremendous depth through the flank and second thigh. Outstanding NZ pedigree being double-bred to both Braveheart and Hingaia 469. Out of a good young Crump cow who sits at the very top of the breed for short days to calving, rib and rump fats and IMF. T172 ticks all the boxes for heifer or cow mating with exceptional fertility, fats, and moderate efficient cow size that generate an SRI index in the top 5% for the breed.

**Comments:** We continue with our used bulls with the first of an exciting line of sons by Turihaua Jupiter, who has bred exceptionally well and passed on his massive EMA to all his progeny. This fellow is bred for real thickness, being out of a young cow sired by N141, our top priced bull in 2019, who was sold to Waimara Angus and was also double-bred to Braveheart. T276 shows the same incredible hindquarter, depth, thickness, and easy doing qualities. Exceptional fertility and muscle in a moderate frame size generate another SRI index at the very top of the breed. Square and very sound with some real power and strength about him.

**Comments:** First of the Q178 sons that are a real feature of the offering this year, and what a thumper he is! This bull was used heavily for 2 cycles over adult cows and has bounced back well showing his exceptional thickness, width, and depth. Wonderful quality head and bone, tremendous feet, incredible volume, and capacity. With very strong fertility traits in the top 10% for the breed, T191 was the heaviest calf at weaning, had a massive 400-day and is on target to be the heaviest on sale day. Real potential here with his great soundness and strong SRI index.

**Comments:** Some real power and strength to this bull sired by the \$106,000 Kaharau Olympic. Tremendous pull-up and presence about him with a strong head, terrific bone, and feet. Depth thickness and quality throughout. Plenty of heavyweights in this pedigree with Reality, Crump, and Infinity ensuring good IMF and easy doing fats. Strong growth, good fertility and an EMA scan that was in our top 5%. This will be a very impressive adult sire! Used as a yearling.

**Comments:** Here is another impressive son of P674 who is the sire of lot 1 and our keeper bull for 2024. P674 is double bred to Braveheart and all his progeny display wonderful easy fleshing and powerful hindquarters. T204 has a strong head and sire's presence with a tremendous pull-up. His growth curve puts him in the top 30% of the breed at all weights and he carries outstanding fertility in the top 5% for the breed. Powerful pedigree with Crump, Braveheart, and Meat Machine all featuring and a profitable SRI index in top 10%. A lovely easy doing type with scale and capacity about him. Used to follow AI.

75%	44%	60%	58%	61%	61%	56%	60%	

**Comments:** The first N166 for this year, we used him to follow up his sire in the adult cow mating programme. He goes back to a cow by the \$100,000 Rangatira 13-38, giving an extra dimension of length and stretch. N166 sired our record priced \$92,500 bull in 2022. T365 scanned particularly well for EMA and he is another bull who will develop into a very impressive adult sire. Clean shouldered and upstanding with real style about him.

76%	50%	63%	61%	63%	63%	60%	60%	

**Comments:** Great old bloodlines here, a direct son of old Meat Machine himself and out of a cow by Goldwyn 17 - both of whom lived to rising 13 years. Dam K979 is breeding strongly and was just sold as a 10-year-old in our 2024 Female Sale. We used T219 to mate heifers with his low birthweight and clean calving ease shoulders. He has strong fertility and the efficient moderate cow size we look for to generate that profitable SRI index of \$147, which ranks in the top 10% of the breed. Good strong topline, depth through the flank and a strong hindquarter. A top option for both heifers and cows.

76%	48%	62%	61%	63%	63%	59%	59%	

**Comments:** This fellow was used as a yearling together with the previous lot and has a very similar pedigree with Meat Machine x Goldwyn 17 bloodlines. Dam is another great old cow who was sold as a 10-year-old to Alan Fielding in our 2023 Female Sale. She is breeding very strongly with a son sold at lot 5 in our 2023 Bull Sale to Glen R Angus for \$18,500, and her first calf as a 2-year-old heifer was L179, sold to Red Oak Stud. T366 displays low birthweight with the moderate efficient cow size we like, and exceptional fertility with a DTC figure in the top 2% for breed. Add in some IMF and easy doing fats in the top 2% and he gets an extremely profitable self replacing index of \$160. Another top heifer mating option!

**Comments:** A different bloodline here with some heavyweights in the pedigree. Sire P593 sold to Cricklewood Angus for \$32,000, and his sire of dam is the \$100,000 Rangatira 13-38. Crump, F540 and Meat Machine all feature as well. As we would expect from these bloodlines, he has plenty of growth and scanned with good muscle and IMF. He was used heavily to follow-up AI in the second cycle out on the tussock so still has some catching up to do. Great length, balance and style about him.

**Comments:** Another bull from our legendary old bloodlines, this time a direct son of old F540 himself and out of a cow going back to Braveheart and with a second shot of old F540. T205 packs in some real carcass data with the third biggest EMA of all 220 bulls scanned. His fats sit in the top 5% and he has plenty of actual IMF. It should be easy to see why we selected him to mate heifers with his lovely clean shoulder, beautiful balance, strong coat and exceptional easy doing attributes. A good sound F540 son with a profitable SRI index. -If you have never had a F540 son have a good look here - probably the last ever!!

**Comments:** Similar bloodline here with the first of the Q250 sons on offer. Q250 is a son of M564, our carcass merit sire, who is out of our NZ record breaking cow G1000. This is a performance pedigree out of a young heifer by Lazarus ensuring we have a great spread of data across the page. Calving ease with moderate birthweight, exceptional fertility, and a top EMA scan. Add in his good IMF and the efficient moderate cow size we aim for, and he generates a very profitable SRI index in the top 10% for breed. A very easy doing type again with lovely smooth fleshing and strong hindquarter with depth and thickness. Used to mate heifers.

**Comments:** Here we have a pen of three exceptionally sound bulls by the two Turihaua bulls we purchased 2 years ago, both very sound types built to thrive on the hill. T369 shows all the attributes we strive for in our environment with a strong coat, wonderful topline, terrific head and bone and is perfect on the ground. Plenty of growth, very strong fertility, and easy doing type. This is a bull who is really on the move after being used late and is worthy of very close inspection with Braveheart, Crump, and Infinity all featuring in the pedigree.

**Comments:** Here is Another of these Woodbank grandsons who are a real feature of the used catalogue with 4 sons of R578 used as yearlings. Strong growth, good muscle, plenty of length and width across the top with a very good hindquarter. Another strong hill country bull who will develop into an impressive sire. Used to mate adult cows.

**Comments:** Some exceptional data on this N119 son. He scanned with the biggest EMA of all 220 bulls scanned and measured with the largest scrotal circumference ensuring his daughters will be exceptionally fertile and hit puberty at a young age. A strong growth curve at all weights, deep, thick, and square with a powerful hindquarter. Note slight white just in front of pizzle. An upstanding well-balanced type. Used to follow-up AI programme.

**Comments:** An exceptionally sound, well-balanced bull to lead this pen of really chunky types. Another grandson of the \$32,000 Woodbank bull and goes back to Meat Machine so bred to be thick and he certainly is! Wonderful structure, terrific foot and bone, and clean shoulders. He scanned with the best EMA of all the bulls when adjusted for his weight and birth date. This is a bull we looked very hard at keeping. Very late born as his mother returned after the AI programme - we see a big future for this bull.

**Comments:** Another very sound, blocky type of bull, this time a Lazarus grandson. An outcross pedigree being out of a heifer by Mackenzie of Stern bloodlines. Great heifer or cow mating option here with calving ease, strong growth, and moderate efficient cow size. Scanned really well for both muscle and IMF which combines to give a very profitable SRI index of \$150. A lovely, moderate framed, easy doing bull.

Meadowslea Stud cows and calves come off the hill for weaning

Meadowslea Stud cows after weaning - job done for another year!

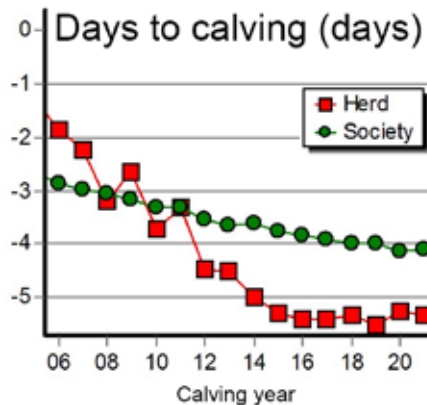

# BRED FOR THE HILL COUNTRY

The development of the Meadowslea hill - country type has been the result of 25 years of selecting animals that perform the best in our hill country environment. Cows that can winter easily on the hill without supplements, stay in good order, calve easily and get back in calf early every year for 10 years has been the focus of our breeding programme. By putting pressure on cows to winter on native hill blocks it quickly became apparent that some animals could manage well in this environment and would easily get back in calf the next year, while those that struggled would be too light going to the bull, and either calve later each year, or come through dry.

Those that were dry or were not holding their condition well enough were removed from the stud herd, while the "easy-doing" types thrived and passed their genetics on to the next generation. It was clear that it was the cows with good fat covers going in to the winter that were consistently performing the best in our environment.

Ultrasound scanning is performed on all yearling bulls in early spring, and on the heifers in the autumn. For us, the most important data is the rib and rump fat cover measurement - we have found these strongly correlate with those easy doing characteristics, and we now put a lot of emphasis on this when selecting bulls to use and heifers to retain. This is reflected in Meadowslea having some of the highest fat EBVs on the Trans Tasman Angus Cattle Evaluation.

These great positive fat EBVs in the Meadowslea herd have come about simply by selecting animals that suit the hill country environment.

The all-important fertility trait of Short Days to Calving measures how quickly cows calve from the time the bull is introduced and is a major influence of beef herd profitability. The more negative the better.

Graph showing the short days to calving EBV average for the Meadowslea herd compared to the NZ average, with major progress made by selecting for early maturing, fertile cattle.

## Carcase Rib Fat (mm)

Graph showing improvement in fat EBVs at Meadowslea while running the herd on hill country, compared with Australasian average. From TransTasman Angus Cattle Evaluation, April 2022.

■ Meadowslea herd  
● Australasian herd average

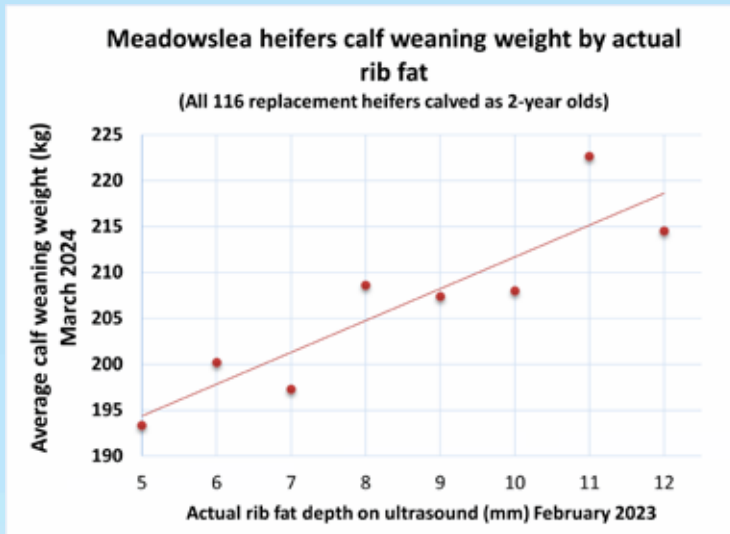

The average rib fat EBVs of the bulls in this catalogue ranks in the top 25% of the breed in NZ.

*Meadowslea Stud 2yr Heifers and their calves on high tussock.*

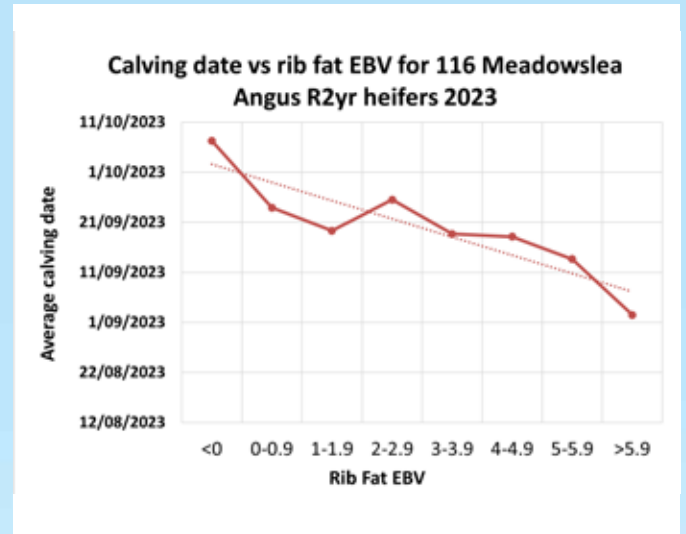

# Rib fats drive profitability in beef cattle

Graph showing direct association between rib fat levels on R2yr heifers in February 2023, and the weaning weights of their calves in early March 2024 during an extremely dry period.

Graph showing association between rib fat EBV and 2023 calving date for the entire Meadowslea R2yr heifers. Those females with strong rib fat levels are able to hold their condition through the long winter on our hill country and consistently get in calf earlier.

This is also key evidence of the importance of testing stud cattle in genuine commercial conditions, as these signals might be less obvious without a long period of limited feed availability.

## The Meadowslea hill-country type

Visual appraisal is still very important for selecting cattle to perform in hill - country

**MASCULINE TRAITS** - A strong head and jaw and thick neck indicate high levels of libido, testosterone and reproduction efficiency

**NECK LENGTH** - A thicker necked animal matures and reaches puberty earlier and has more libido

A longer neck indicates a higher maintenance animal that is slower to reach puberty and re-breed

**HEART GIRTH** - Large heart girth is an indicator of vigor and easy keeping ability

Small heart girth animals are more susceptible to stress, are higher maintenance and do not perform well on tussock

**RIB FAT** - Strong rib fat covers are the essential energy store for adverse conditions.

They indicate easy-doing and finishing ability and are directly related to increased fertility in both heifers and cows.

**STRUCTURAL SOUNDNESS, FEET AND BONE** - High country cattle cover large distances over rugged terrain so a strong skeleton is essential

**HIDE** - a good thick skin and coat is essential in the cold harsh environment

**FLANK** - Deep flanked animals are easier keeping, have more meat in the rump and have more maternal and reproductive efficiency

Higher flanked animals tend to be flighty, are higher maintenance and take longer to finish on grass

**SCROTAL SIZE** - Larger scrotal size at 12 months indicates daughters will reach puberty earlier, be more fertile, and re-breed early every year.

**Comments:** Here is one to really check the pedigree on - he is by Q250 and out of a heifer by P674 who is breeding so well, being the sire of lot 1 in this sale as well as our top keeper. P674 is double bred to Braveheart, while these Q250 sons are so consistent in their data and style. This is a low birthweight heifer or cow mating option with good growth. Exceptional fertility, wonderful easy doing fats and strong IMF all combining with the efficient moderate cow size give a top SRI index of \$146. This is a bull to have a close look at!

74%	39%	61%	57%	59%	58%	55%	56%	

**Comments:** A Lazarus grandson here with really strong growth once again. Super scrotal figure indicates fantastic fertility coming in through the pedigree from Crump, Reality, and Goldwyn 17 - all trait leaders for DtC. T301 scanned well for IMF placing him in the top 15% for the breed for that EBV.

**Comments:** The first son to be offered for sale by R646, who was our keeper bull in 2022 and you must easily see why. T211 bull has a very good pedigree being out of a great old 10-year-old cow sold in our 2024 Female Sale to Alan Fielding. Strong coat, thick and square body with moderate birthweight, strong fertility, and those very easy doing fats we look for in the high country. Wonderful hill type station bull.

**Comments:** The first of the R818 sons offered- R818 was sold to Jade Park in Australia in 2022. He is a very thick type and has left tremendous strength and thickness. T106 is a heifer and cow option with very strong growth, fantastic fertility, and those easy doing rib and rump fats we expect of this bloodline. Another bull out of these high performing young L226 daughters. A strong index and another top hill country station bull.

**Comments:** Exceptional growth and scale about the first of this year's line-up of Turiroa 14830 sons. Powerful bulls in the pedigree with Braveheart, Infinity, and Radiata featuring. Strong growth, good fertility, and he scanned with ample muscle and IMF. Terrific upstanding bull with wonderful presence and outlook.

75%	42%	63%	58%	61%	61%	57%	57%	

**Comments:** Another big scopy bull here, this time by Rangatira 16209 out of a 10-year-old Crump cow who was sold in our 2023 Female Sale. Exceptional fertility with a DTC figure in the top 5% for the breed. Lovely clean shoulders and the same impressive upstanding outlook with very easy keeping fats making him a good pick for a bigger framed type

**Comments:** Here is a classic N166 son out of cow going back to the \$100,000 Rangatira 13-38. A beautifully smooth topline with width across the top, a terrific hindquarter and the balance and style we always get from N166. Good spread of data across the page for hill-country production, with adequate growth, fertility, plenty of muscle, strong fats, and a very strong IMF scan.

74%	41%	61%	57%	59%	59%	55%	57%	

**Comments:** This is a Panther X Goldwyn 17 cross which always seems to work well. Another very good heifer or cow mating option with calving ease, low birth-weight, and good growth. Exceptional fertility at the very top of the breed. This bull scanned with the highest IMF of all 220 bulls scanned and his dam Q463 has an IMF figure of +3.9, so you can be sure he will pass this on to his progeny. With his exceptional rib and rump fats his progeny will mature early, prime up, and lay down that IMF at a young age. His nice efficient moderate cow weight ensures he generates a very profitable self-replacing index of 143. A lot to like here!

75%	44%	62%	59%	61%	61%	56%	63%	

**Comments:** A super thick pen of bulls to start this next mob. T317 is bred to be solid, sired by Turihaua Tornado out of a cow by Turihaua Crump. Incredible thickness, depth, and hindquarter with tremendous width across the top. Moderate birthweight, good growth, strong fertility and those easy doing fats gives us the early maturing type we love for the hardest hill-country. Note some white under flank but still worth a close look.

<b>+\$119</b>

**Comments:** A son of the \$106,000 Kaharau Olympic, out of a K703 daughter. Has the thickness and easy doing ability we would expect. This fellow's mother died of Tutu poisoning well before weaning and he has done very well just to be here. We expect his growth figures should be much higher looking at the size and scale of the bull himself and he will keep moving yet. Good fertility, muscle, fats, and IMF.

**Comments:** Another of these consistently thick, blocky Tornado sons. Very sound with real quality throughout. Moderate birthweight gives a heifer mating option with mid-range growth for hill country. He scanned well for EMA and fats with good IMF as well. An efficient hill-country type ideal for the hardest country - check him out!

**Comments:** Here is another Q178 son, again out of an L226 cow who has bred a previous top sale bull. Great heifer or cow mating option here with calving ease, low birthweight, and strong fertility. This chap scanned with the 5th biggest EMA of all 220 bulls on hand. Like all the Q178 sons he is thick, deep, and wide with a very good backend and strong coat. A very good pick here!

**Comments:** A son of Turihaua Rhinestone, throwing back to old Rhino himself. Out of a good breeding cow going back to Reality whose first calf as a 2-year-old was a top bull sold to Jeff Keen at \$10,000. Good heifer mating figures with calving ease, low birth weight, and good fertility. His moderate efficient frame size and easy doing attributes help to generate a profitable SRI index. A nice quality type of bull.

**Comments:** Lovely upstanding type here by a son of the high performing P674, the sire of lot 1 in this sale. Outstanding pedigree double-bred to both Braveheart, and F540, with Meat Machine and Crump also featuring ensuring a good spread of data. He scanned really well for EMA and recorded the 4th highest IMF% of all 220 bulls scanned. This bull is a twin and is really on the move now - worth a close inspection!

**Comments:** A Panther son here out of a good young Goldwyn 17 cow so we know to expect some IMF with that pedigree. Moderate birthweight giving heifer mating options followed by good growth and strong fertility. He scanned well for IMF and his dam sits in the top 2% of the breed with an IMF of +3.5. He has incredible easy doing fats, almost off the scale, and with a moderate efficient cow size he generates a very profitable SRI index in the top 20% for breed A nicely balanced bull with a lot to offer.

**Comments:** A very well-bred bull here combining two of our top current bloodlines. Sired by Q250, and out of a 2-year heifer by P674. Terrific heifer mating option here with calving ease, low birthweight, and exceptional fertility traits. Easy doing fats at the very top of the breed, good IMF scan, and the moderate efficient cow size all help to generate an SRI index in the top 10% for the breed. This is definitely one to check out closely deep in the book!

**Comments:** A great heifer mating option to finish on with this son of R818, the bull sold to Australia in the 2022 sale. Heifer mating potential here once again. Great calving ease, low birthweight, strong growth and plenty of fertility combined with efficient moderate cow size and his easy-doing fats gives another profitable SRI index in the top 25% for the breed.

Advice & Insurance

# FMG Premier Bull Sale Insurance

## What is FMG Premier Bull Insurance?

FMG provides automatic insurance for all bulls auctioned at an FMG Premier Bull Sale up to the value of \$50,000 for 14 days at no cost to the purchaser.

For any bull purchased over \$50,000 talk to an FMG representative.

## What is the length of cover?

You will automatically be insured for the specified bull for 14 days. You also have the option to extend the length of insurance to 12 months. Simply tick the “Extend your Premier Bull Insurance” option on the Purchaser Slip. The specified bull is then insured for the remaining period of 12 months at **7.6%** of the purchase price (the sum insured for the bull). If you would like to discuss an alternative timeframe, please have a chat with your local FMG representative.

You don't have to pay today, FMG will invoice you for this additional cover.

## What are the benefits?

✓ <b>Infertility</b>	Cover if your specified bull has to be euthanised due to permanent infertility caused by certain accidents, disease, injury, or illness.
✓ <b>Theft or death</b>	We cover your specified bull for theft or death caused by certain accidents, disease, injury, or illness (including while in transit anywhere in New Zealand).
✓ <b>Vet costs</b>	We cover up to \$500 for treatment of your specified bull to prevent death.

## What will FMG pay?

FMG will pay the fair market value of your specified bull, less any amount you receive for the sale of the carcass, up to the amount shown on the insurance certificate.

# Bull Purchaser Instruction and FMG Insurance Slip

Please complete this slip and hand to the Booking Clerk before leaving the sale. This slip **MUST** be fully completed to be eligible for the 14 days free Premier Bull Insurance.

# Turihaua Crump E5

Turihaua Crump (born 2009) Recognised as one of NZ's most influential and long lasting sires with over 450 progeny in 21 herds in both NZ and Australia. His daughters have exceptional fertility ranking him as a trait leader for Short days to calving.

Sons and Grandsons selling up to \$92000 for studs across NZ.

His descendants make up 50% of the catalogue ensuring industry leading fertility.

# Meadowslea F540

Meadowslea F540 (born 2010). Our most influential home-bred sire with over 300 progeny in 11 herds in NZ and Australia. He is a Trait leader for Short Gestation and Milk, with very strong maternal and fertility traits.

his descendants make up over 30% of the catalogue with the F540 X Crump combination legendary.

**LOT 1: MEADOWSLEA T172** We start our 2024 catalogue with a signature Meadowslea type, displaying all the traits we value so highly for efficient sustainable beef production on hill-country. Used heavily as a yearling, and by the same sire as our 2024 keeper bull, T172 is incredibly deep, thick, and easy doing with a hindquarter that would be hard to beat anywhere. Tremendous depth through the flank and second thigh. Outstanding NZ pedigree being double-bred to both Braveheart and Hingaia 469. Out of a good young Crump cow who sits at the very top of the breed for short days to calving, rib and rump fats and IMF. T172 ticks all the boxes for heifer or cow mating with exceptional fertility, fats, and moderate efficient cow size that generate an SRI index in the top 5% for the breed.
