RANGATIRA ANGUS

Breeding quality for 61 years

Welcome to the final Rangatira Angus Rising 2 Year Old and Rising 1 Year Old Bull Sale – an end of an era. We have had the most wonderful and rewarding time being a part of breeding Angus Stud Cattle. There have been many highlights selling Stud and Commercial bulls throughout New Zealand and Australia from both our time with Kaharau Angus Stud and all the years as Rangatira Angus.

We would like to thank everyone who has been a part of Rangatira Angus over the years. The outstanding support from our bull buyers, under bidders, auctioneers and stock agents has been very humbling and we are incredibly thankful to you all. Alastair MacPherson and Dollar Maxwell have worked for us at Coventry Station for 22 years. We have been extremely fortunate to have their loyal & unwavering support along with our family. Rangatira has always aimed to produce early maturing, quiet, easy doing cattle with good structure, fertility and meat through constantly evaluating, purchasing and retaining top sires. The first sons from Kaharau Outlander are for sale this year – a thick meaty sire with good bone. Again we are thrilled with how Turiroa Maverick has crossed with our Rangatira genetics; more of his sons are for sale this year. This year we have catalogued 52 Rising Two Year Old Bulls and 12 Rising One Year Old Bulls. We are impressed with their weight gain, especially due to their early weaning – 24th of February 2020 for the two year olds and the 9th of February 2021 for the rising one year old bulls.

We are really pleased with the lineup of bulls this year and feel confident that there will be bulls available at the right price for all buyers. Bulls can be viewed walking on our Rangatira Angus Stud YouTube Channel 2021 or at www.rangatiraangus.co.nz.

We look forward to catching up with you on Sale Day.

TAAHEKE & RANGANUI STATIONS have had ONGOING SUCCESS for many years in the “STEAK OF STATION”, regularly placing in the TOP 3 having used RANGATIRA GENETICS for decades.

TODAY

Top taste steers station to victory

Silver Fern Farms • Gisborne

24 Oct 2013

Johnny and Pip Williams' angus steak was judged tastiest in the Silver Fern Farms' Steak of Station competition, held at the Poverty Bay A & P Association Show.

Competition organiser Paul Kirkpatrick said the Williams' family of Taaheke Station, Peheri, entered their angus steer among a strong line-up of 25 quality cattle.

“The Steak of Station competition was initiated four years ago to bring Poverty Bay/East Coast cattle back to the Poverty Bay A & P Show. Prime steers and heifers are judged on the hoof, on the hook and on

taste,” Mr Kirkpatrick says.

Points from each section are accumulated to find the champion.

“This year was the first time we used our innovative new science-based eating quality system to score the “on the hook” section.”

Mr Kirkpatrick said the competition was enhanced by the use of the Silver Fern Farms eating quality system, which ties consumer preferences with eating quality, measuring eight key criteria to determine the best tasting steak.

“Our point of difference is that we're trying to take our

products away from the commodity space and into high value consumer products which people are prepared to pay a premium for. Having a system that uses clever science to guarantee that eating quality is a big win for our farmers.”

Farmers supplying prime beef to the co-operative will receive new grading reports indicating how their beef rates across a set of eating quality criteria. “This system gives valuable feedback to beef producers so they can produce better quality meat for consumers and receive premiums that recognise their focus on delivering quality beef every time.”

“Johnny and Pip Williams' entry scored consistently well across all the sections. It had a low pH and scored optimum points with its marbling, meat colour and fat colour. Then the taste test judges backed up what the science had told us, by scoring very well for flavour and tenderness.”

The Williams' took home the Poverty Bay A & P Association ribbon and the prize pack of a carton of Silver Fern Farms beef, a case of Kirkpatrick Estate wine, a nights' accommodation at the luxurious Pacific Harbour Motor Inn and a meal for two at Gisborne's renowned Soho Bar and restaurant.

QUALITY MEAT & KILOS = PROFIT

Rangatira cattle have the **STRUCTURAL SOUNDNESS AND AGILITY** to move around on the hills. Good bone and easy doing ability allows them to carry their weight well and reach target weights early.

Kilos gained early = **TARGET WEIGHTS REACHED EARLY** = stock are off the farm early = **PROFIT**.

This is a real benefit to the commercial farmer.

FERTILITY is directly related to the scrotal size in bulls.

2021 Sale Bulls scrotal measurement average is **42.5cm**.

RANGATIRA GENETICS produce **QUALITY BEEF** – please see page 2.

RANGATIRA DAMS

The Rangatira cow herd has **STRONG MATERNAL INSTINCTS**,
with **EASE OF CALVING AND GREAT MILKING ABILITY**, raising strong healthy calves.

We calve on medium to steep hill country and calving problems are almost non-existent in our herd.
When selecting stud sires it is very important to us that the sire is smooth shouldered to ensure **EASY CALVING**.

This year's sale bulls were weaned **EARLY** on 24th of Feb 2020 due to our Dispersal Sale in April.

The average weaning weight for the 2021 Sale Bulls is **275kg**.

This shows how well the **RANGATIRA HILL COUNTRY DAMS LOOK AFTER THEIR CALVES**.

We have placed a huge emphasis on selecting the females we retain in the Stud. **FERTILITY, BEEF QUALITY, TEMPERAMENT & AN EASY DOING ABILITY** that enables stock to mature early are all paramount. **LONGEVITY & GOOD STRUCTURE** of an animal go hand in hand and are crucial to performance on New Zealand hill country. At our Dispersal sales all 450 lots catalogued passed New Zealand Angus AA Inspection and both sales achieved a **COMPLETE CLEARANCE**.

WE'VE MADE BULLS MORE ATTRACTIVE.

**14 days
FREE
cover**

**6.5%
for 12
months**

The handsome beasts in this catalogue will look even more appealing on sale day, thanks to FMG – the country's leading rural insurer. With 14 days free Exclusive Bull Cover, they'll be automatically insured from the fall of the hammer, covering their transit and infertility. And you can keep that cover going for the remaining 12 months for just 6.5% of the purchase price, for bulls up to the value of \$50,000. So don't miss this chance to buy bulls covered by FMG. It's a mighty attractive offer.

Please note this is only a summary of FMG products and services and is subject to our specific product documentation. For full details, refer to the relevant policy wordings at fmg.co.nz

We're here for the good of the country.

Mātawhero Weaner Fair

John Dowding with Rangatira Angus Bulls in the 1970s

CONFIRMATION AND STRUCTURAL SOUNDNESS IS PARAMOUNT

We are proud to say that all the bulls in our sale catalogue have been inspected for structural soundness and confirmation by New Zealand Angus Association Breed Inspectors.

LONGEVITY and FERTILITY

A large portion of the bulls in this years catalogue are from older cows who have been breeding well for many years. Rangatira dams have natural maternal instincts and good milking ability regularly weaning their calves to around 300kg. Fertility is directly related to the scrotal size in bulls. Our average scrotal measurement for the sale bulls this year is 42.5cm

TEMPERAMENT: We aim to breed quiet, easily handled cattle. They are used to motorbikes, horses and dogs.

***ALL BULLS OFFERED TB AND BRUCELLOSIS FREE. RANGATIRA IS AN ACCREDITED HERD C10.
BREEDPLAN FIGURES ARE AVAILABLE ON REQUEST. NO FEET TRIMMED AT RANGATIRA.
B.V.D. – ALL BULLS ARE TESTED B.V.D. NEGATIVE AND VACCINATED.***

RANGATIRA'S BREEDING OBJECTIVES

- 🎯 To enable **COMMERCIAL CLIENTS TO MEET THEIR MARKETS EARLY** – We consider this a winner as it provides huge cost savings to farmers commercially.
- 🎯 We have been a strong supporter of the Angus Bull Evaluation Unit. Entry is open to all Registered Angus Breeders where up to 40 bulls are run as one mob in a common environment allowing all bulls the opportunity to express their genetic potential on the same feed at all times. In **2015** we entered 2 bulls who were 1st and 2nd heaviest for their final weigh in at the Bull Unit. They were both meaty and easy doing bulls. It was exciting at the 2015 open day to see the people's choice award go to Atahua 902 who was sired by Kaharau 610 – a bull purchased from us in 2012. In **2016** we entered a very good Lancelot son in the B.E.U. With meat in all the right places and wonderful overall weight gain (1.3.2016, 804kgs). **2017** Rangatira Bandit 15-109 was the heaviest bull at the final weigh in at the Angus Bull Evaluation Unit (20.4.17, 850kgs).
- 🎯 On 6th May **2017** 9 rising 2 year old bulls from Coventry Station killed out at an average carcase weight of 409kgs realising an average value of \$2,113.00 excluding GST.
- 🎯 In March **2017** at the Matawhero Cattle Fair, the highest priced line of steers were from a station using Rangatira Genetics. Top prices have been achieved by the Studs Commercial Buyers at cattle fairs in other regions 2016-2020.
- 🎯 **2017-2021** Commercial farmer's results echoed 2017 – Kgs plus equals \$ plus. Commercial gains from using Rangatira Genetics.
- 🎯 **2018** Our Rangatira Bull was again the heaviest bull at the National Angus Bull Evaluation Unit achieving the heaviest weight at all weigh-ins.
- 🎯 **2018** Purchased Kaharau Outlander 632 in partnership with Turiroa Angus Stud. New Zealand's top price bull in 2018.
- 🎯 **2019** Purchased Tangihau Top Gun N436. New Zealand's top price bull in 2019.
- 🎯 **2020-2021** Dispersal Sales achieved a complete clearance of 450 lots catalogued. We are extremely proud that all lots passed NZAA inspection.

Investing in the Future!

RANGATIRA ANGUS STUD

Rangatira Angus Stud was founded in 1960 by John and Shirley Dowding at Rangatira, Te Karaka. Charlie and Susie Dowding and their family have continued to run Rangatira Angus since 1986. In 1999 Susie's parents Colin and Jackie Williams gave them the opportunity to farm and to breed Angus Stud Cattle at Coventry Station, where Charlie & Susie bred half of the Kaharau Angus Stud cattle for 15 years until 2015. 2015 saw a return to their original stud prefix Rangatira Angus. Alastair MacPherson and Dollar Maxwell have made an enormous contribution to the running of the farms and the stud and have worked at Coventry Station since 1999.

Highlights over the years include:

-  Winning the Wonder Cup for the best bull at the Matawhero Angus Bull Sale many times.
-  The live export of Rangatira Zoro 190 to Glengowan Angus Stud, Australia.
-  2010 Kaharau Xtra 920 won Reserve Champion Angus Bull at the National Beef Expo.
-  2011 winning the Supreme Champion Angus Bull and Reserve Champion of Champions with Kaharau Geronimo 161.
It was very special for Charlie and Susie to win this award as the Borthwick Trophy was originally awarded for the best pen of four unled bulls at the National Angus Sale and was won by Charlie's parents John & Shirley Dowding, Rangatira Angus Stud in 1976 and 1980.
-  2015 Rangatira Angus Stud had an incredible sale. We achieved a record price for an on farm auction in NZ with Rangatira 13-38. He was sired by Mt Mable Thor 660 and purchased by the Cricklewood Stud, Nuhaka. We sold 12 bulls for stud transfer in 2015 - 1 at the Beef Expo and 11 at our on farm sale. We really appreciate the wonderful support from all our stud buyers, commercial buyers and stock agents.
-  In 2016 we entered the 'Steak of Origin' competition for the first time entering one heifer. She achieved 2nd equal placing out of 180 entries for succulence and gained a semi final placing - the top 20% of entries.
-  'Steak of Station' Gisborne Show 2015 long time buyers of our bulls Taaheke and Ranganui Stations again won 1st and 2nd prizes for the 'Steak of Station' competition, and have had continued success regularly placing in the top 3 for many years. All entries in this competition bred from Rangatira Genetics achieved top grading from Silver Fern Farms Beef Eating Quality.
-  It is a huge thrill to see the studs Commercial Buyers regularly receive top prices at Saleyards and all meat processing with top grading scores.
-  It was exciting to see cattle from RANGATIRA Angus Genetics **AGAIN** achieve top prices at Matawhero, Wairoa, Stortford Lodge and Fielding cattle sales during the past year.

- 🎯 RANGATIRA constantly evaluates and purchases top sires as well as retaining several of the studs own two year old sires to use in the stud. All sires are selected for structural soundness, for the fertility and production of their dam lines and sire backgrounds.
- 🎯 We calve on medium to steep hill country and calving problems are almost non existent in our herd.
- 🎯 RANGATIRA cattle are grass and hay fed only.
- 🎯 RANGATIRA'S aim has always been to produce early maturing cattle, easy doing, meaty, with very good structure, temperament, soundness and fertility.
- 🎯 All RANGATIRA Bulls have been inspected for breeding soundness by New Zealand Angus Association Breed Inspectors.

This Inspection service is offered by Angus New Zealand to breeding members as a form of quality assurance and indicates that the animal has passed inspection on the specific day it was viewed. The inspection is carried out by an approved Angus NZ Inspector, and animals of a minimum age which pass this inspections may assume an "Independently Inspected" status and may be promoted under the associated Angus NZ "Independently Inspected / AA Tick" logo.

Inspections are carried out in accordance with the Angus NZ Inspection Manual 2011.

- 🎯 ALL 2021 RANGATIRA SALE BULLS ARE AM, NH, DD AND CA FREE.
- 🎯 ALL BULLS HAVE BEEN SNP TESTED AND SIRE VERIFIED

BULLS ARE SCANNED FOR CARCASE DATA AT 600 DAYS.
B.V.D.: ALL BULLS TESTED AND RETURNED A NEGATIVE BLOOD TEST FOR B.V.D.
THEN B.V.D. VACCINATED. ALL BULLS HAVE ALSO BEEN VACCINATED WITH 7 IN 1.

CONDITIONS OF SALE

The sale will be conducted in accordance with Conditions of Sale as set down by the Gisborne Stock and Station Agents Association, a copy of which will be exhibited at the sale.

Freight: Payable by the vendor throughout the North Island.

Delivery: Week following sale. Bulls may be held under exceptional circumstances by arrangement with vendor.
All cattle offered have been inspected by a New Zealand Angus Association Breed Inspector.

Guarantee: All 2021 Rangatira sale bulls are guaranteed for three years from date of sale for structural soundness and fertility. The purchase price will be refunded without interest, expenses, costs or damages – the value of the bull shall decrease by 1/3 each year less salvage value.

Fertility: The entry of any bull in this Catalogue constitutes a Guarantee of Fertility. Notice of infertility in all cases of such, to be in writing, and in the hands of the Vendor not later than six calendar months from 30-6-21.

The guarantee is limited to the individual value of a bull as a breeder and does not exceed to the loss of profits or otherwise sustained in the event of infertility or no-capacity being proved. The purchase price of any bull proved to be infertile shall be refunded without interest, expense, cost or damages. Any disputes will be settled by an arbitrator appointed by the auctioneers. A veterinary surgeons certificate shall be produced by the purchaser, when required.

TERMS AND CONDITIONS

The New Zealand Stock & Station Agent's Association Conditions of Sale and, to the extent deemed relevant by PGG Wrightson Limited (PGW), PGW's Terms of Sale apply to this sale. When proceeds are credited or a purchase is debited to a PGW monthly credit account, then PGW's Monthly Account Terms of Trade (as amended from time to time) apply to the extent deemed relevant by PGW. These terms can be inspected at the registration desk and on the wall in the auction room. The current versions of PGW's Terms of Sale and Monthly Account Terms of Trade are also available online at: www.pggwrightson.co.nz/Our-Company/Terms-and-Conditions or in hardcopy on request.

All intending purchasers must register at the sales office prior to the sale.

PGW will pay a purchasing rebate of 6% of the purchase price excluding GST, plus GST, to livestock companies & recognised independent live-stock agents with a PGW account who have introduced buyers to PGW before the sale and/or accompanied buyers to the sale.

Stud Transfers: Please note - stud transfers will not be given to any bull that does not have an AA rating.
Insurance: Insurance is the purchaser's responsibility. Transit Insurance and period Insurance can be arranged with the auctioneers, who recommend these insurances to all purchasers.

Overseas Conditions: All sales to overseas buyers are conditional on the cattle passing the necessary tests for importation into the purchaser's country.

Inspection: Inspection of Sale Cattle is invited prior to sale either by contacting the Auctioneer and Stock Agents or, Charles Dowding, Phone 06-862 3876. Mobile: 0274 752 798.
Email: cdowding@xtra.co.nz or Alastair McPherson, Phone 06-862 8077.

Sale Weight

A Kaharau Mangaroa and Cricklewood Crusader son. He has a good head, width and a meaty backend. Fertility here with a scrotal of 44cm. Rangatira 19-789 has passed structural soundness evaluation. He is not AA only due to a small spot of white on his pizzle.

Abron provides customised, smart fertiliser solutions for the New Zealand farmer who is wanting to unlock the full potential of their soil, to improve their environmental footprint and increase pasture performance. We have a philosophy of taking the best of the conventional and biological fertiliser inputs to get the most optimal outcomes for the farm.

The health of your animals and profitability of your farming operation starts with the health of your soil.

LOOKING AFTER YOUR BULL ON ARRIVAL

When a bull leaves Rangatira Angus he is leaving the security of a mob and will arrive in a strange environment at the purchaser's property. On arrival make sure he has a steer or cow as a companion, straight away, possibly with a feed of hay and put them into a good grass paddock.

Young bulls are still growing fast and need enough feed to maintain their growth pattern and be able to settle the cows quickly and efficiently. Respect your bulls and handle them quietly, walk them rather than rushing them. Treat them with care and in a gentle manner and they will do likewise to you. Rangatira bulls are used to being handled by stockmen on quads, horses or on foot, also with dogs. They treat electric fences with respect.

Monitor your bull regularly while out with the cows, as accidents can happen.

When the season is finished, your bulls should be drenched and put away with enough feed in front of them. Adequate feed will help stop fighting and help bulls to settle into the bull group.

We wish you all the best.

Exclusive Bull Cover

What is Exclusive Bull cover?

FMG has partnered with Angus NZ to offer comprehensive insurance cover from the fall of the hammer with this vendor. All bulls auctioned at this exclusive Angus NZ and FMG sale up to the value of \$50,000 will automatically be covered under FMG's Exclusive Bull cover for 14 days at no cost to the purchaser.

Length of cover

To extend cover for the specified bull beyond 14 days you need to tick Exclusive Bull cover 12 months on the Purchaser Instruction and Insurance Slip in this catalogue. The specified bull is then covered for the remaining period of 12 months. The premium is payable to FMG and is in addition to the purchase price of the bull.

If you require an alternative cover period talk to an FMG representative.

Disclaimer

Please note this is only a summary of the product and is subject to our specific product documentation. For full details, you should refer to the policy document. You can get these documents, and any other information you need, from your FMG representative, by calling us or visiting our website.

Your bull's value

Any bull covered under this policy must be purchased for \$50,000 or less.

For any bull purchased over \$50,000 talk to an FMG representative.

During the period of insurance, the specified animal is covered for:

- Death or infertility as a result of accident, disease or illness.
- Transit.
- Theft.

What we will pay

Fair market value of your specified bull, less any amount you receive for the sale of the carcass, up to the amount shown on the insurance certificate.

Purchaser Instruction and Insurance Slip

This slip MUST be completed and handed to the Booking Clerk before leaving the sale.

NZ ANGUS BREEDPLAN

Understanding the EBVs, Selection Indices and Accuracy

EBVs

An animal's breeding value is its genetic merit, half of which will be passed on to its progeny. While we will never know the exact breeding value, for performance traits it is possible to make good estimates. These estimates are called Estimated Breeding Values (EBVs).

In the calculation of EBVs, the performance of individual animals within a contemporary group is directly compared to the average of other animals in that group. A contemporary group consists of animals of the same sex and age class within a herd, run under the same management conditions and treated equally. Indirect comparisons are made between animals reared in different contemporary groups, through the use of pedigree links between the groups.

EBVs are expressed in the units of measurement for each particular trait. They are shown as +ive or -ive differences between an individual animal's genetics difference and the genetic base to which the animal is compared. For example, a bull with an EBV of +50 kg for 600-Day Weight is estimated to have genetic merit 50 kg above the breed base of 0 kg. Since the breed base is set to an historical benchmark, the average EBVs of animals in each year drop has changed over time as a result of genetic progress within the breed.

The absolute value of any EBV is not critical, but rather the differences in EBVs between animals. Particular animals should be viewed as being "above or below breed average" for a particular trait.

Whilst EBVs provide the best basis for the comparison of the genetic merit of animals reared in different environments and management conditions, they can only be used to compare animals analysed within the same analysis. Consequently, NZ ANGUS BREEDPLAN EBVs cannot be validly compared with EBVs for any other breed.

Although EBVs provide an estimate of an animal's genetic merit for a range of production traits, they do not provide information for all of the traits that must be considered during selection of functional animals. In all situations, EBVs should be used in conjunction with visual assessment for other traits of importance (such as structural soundness, temperament, fertility etc). A recommended practice is to firstly select breeding stock based on EBVs and to then select from this group to ensure that the final selections are otherwise acceptable.

EBVs are published for a range of traits covering fertility, calving ease, milking ability, growth, carcase merit and feed efficiency. When using EBVs to assist in selection decisions it is important to achieve a balance between the different groups of traits and to place emphasis on those traits that are important to the particular herd, markets and environment. One of the advantages of having a comprehensive range of EBVs is that it is possible to avoid extremes in particular traits and select for animals with balanced overall performance.

Calving Ease EBVs (%) are based on calving difficulty scores, birth weights and gestation length information. More positive EBVs are favourable and indicate easier calving.

CE % Direct = Direct Calving Ease - The EBV for direct calving ease indicates the influence of the sire on calving ease in purebred females calving at two years of age.

CE % Daughters = Daughters' Calving Ease - The EBV for daughters' calving ease indicates how easily that sire's daughters will calve at two years of age.

Gestation Length EBV (days) is an estimate of the time from conception to the birth of the calf and is based on AI and hand mating records. Lower (negative) GL EBVs indicate shorter gestation length and therefore easier calving and increased growth after birth.

Birth Weight EBV (kg) is based on the measured birth weight of progeny, adjusted for dam age. The lower the value, the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

200-Day Growth EBV (kg) is calculated from the weight of progeny taken between 80 and 300 days of age. Values are adjusted to 200 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

400-Day Weight EBV (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

600-Day Weight EBV (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

Mature Cow Weight EBV (kg) is based on the cow weight when the calf is weighed for weaning, adjusted to 5 years of age. This EBV is an estimate of the genetic difference in cow weight at 5 years of age and is an indicator of growth at later ages and potential feed maintenance requirements of the females in the breeding herd. Steer breeders wishing to grow animals out to a larger weight may also use the Mature Cow Weight EBV.

Milk EBV (kg) is an estimate of an animal's milking ability. For sires, this EBV indicates the effect of the daughter's milking ability, inherited from the sire, on the 200-day weights of her calves. For dams, it indicates her milking ability.

Scrotal Size EBV (cm) is calculated from the circumference of the scrotum taken between 300 and 700 days of age and adjusted to 400 days of age. This EBV is an estimate of an animal's genetic merit for scrotal size. There is also a small negative correlation with age of puberty in female progeny and therefore selection for increased scrotal size will result in reduced age at calving of female progeny.

Days to Calving EBV (days) indicates the fertility of the daughters of the sire. It is the time interval between the day when the female is first exposed to a bull in a paddock mating to the day when she subsequently calves. A negative EBV for days to calving indicates a shorter interval from bull-in date to calving and therefore higher fertility.

Carcase Weight EBV (kg) is based on abattoir carcase records and is an indicator of the genetic differences in carcase weight at the standard age of 750 days.

Eye Muscle Area EBV (sq cm) is calculated from measurements from live animal ultrasound scans and from abattoir carcase data, adjusted to a standard 400 kg carcase. This EBV estimates genetic differences in eye muscle area at the 12/13th rib site of a 400 kg dressed carcase. More positive EBVs indicate better muscling on animals. Sires

with relatively higher EMA EBVs are expected to produce better-muscled and higher percentage yielding progeny at the same carcass weight than will sires with lower EMA EBVs.

Rib Fat and Rump Fat EBVs (mm) are calculated from measurements of subcutaneous fat depth at the 12/13-rib site and the P8 rump site (from live animal ultrasound scans and from abattoir carcasses) and are adjusted to a standard 400 kg carcass. These EBVs are indicators of the genetic differences in fat distribution on a standard 400 kg carcass. Sires with low, or negative, fat EBVs are expected to produce leaner progeny at any particular carcass weight than will sires with higher EBVs.

Retail Beef Yield EBV (%) indicates genetic differences between animals for retail yield percentage in a standard 400 kg carcass. Sires with larger EBVs are expected to produce progeny with higher yielding carcasses.

Intramuscular Fat EBV (%) is an estimate of the genetic difference in the percentage of intramuscular fat at the 12/13th rib site in a 400 kg carcass. Depending on market targets, larger more positive values are generally more favourable.

Dockility EBV (%) is an estimate of the genetic differences between animals in temperament. Dockility EBVs are expressed as differences in the percentage of progeny that will be scored with acceptable temperament (ie. either "docile" or "restless").

Selection Indices

There are currently two different selection indexes calculated for New Zealand Angus animals. These are Self-Replacing and AngusPure. Each selection index describes a different production/market scenario and relates to a typical commercial herd in New Zealand that is targeting the following specifications.

Index values are reported as EBVs, in units of relative earning capacity (\$'s) for a given market. They reflect both the short-term profit generated by a sire through the sale of his progeny, and the longer-term profit generated by his daughters in a self-replacing cow herd. More information is available on selecting animals using a selection index.

The Index values are derived using BreedObject technology. More information is available from the BreedObject web site.

Self-Replacing Index (\$) - Estimates genetic differences between animals in net profitability per cow joined for a self-replacing commercial herd, targeting the production of grass finished steers. Steers are assumed marketed at 525 kg live weight (280 kg carcass weight and 10 mm fat depth) at 16 months of age.

AngusPure Index (\$) - Estimates genetic differences between animals in net profitability per cow joined for a self-replacing commercial Angus herd, targeting the production of grass finished steers for the AngusPure programme. Steers are assumed marketed at 525 kg live weight (280 kg carcass weight and 10 mm fat depth) at 18 months of age with a significant premium paid for marbling.

Note that \$Index values for individual animals are sensitive to the assumptions used in the BreedObject analysis to calculate the selection index. More information is available on the weightings used in the New Zealand Angus Selection Indices.

Accuracy

Accuracy (%) is based on the amount of performance information available on the animal and its close relatives - particularly the number of progeny analysed. Accuracy is also based on the heritability of the trait and the genetic correlations with other recorded traits. Hence accuracy indicates the "confidence level" of the EBV. The higher the accuracy value the lower the likelihood of change in the animal's EBV as more information is analysed for that animal or its relatives. Even though an EBV with a low accuracy may change in the future, it is still the best estimate of an animal's genetic merit for that trait. As more information becomes available, an EBV is just as likely to

Accuracy range	Interpretation
less than 50%	EBV should be considered as a preliminary estimate. It could change substantially as more performance information becomes available.
50-74%	Medium accuracy, usually based on the animal's own records and pedigree. Still subject to substantial changes with more information, particularly when the performance of progeny are analysed.
75-90%	Medium - high accuracy and includes some progeny information. Becoming a more reliable indicator of the animal's value as a parent.
more than 90%	High accuracy estimate of the animal's true breeding value. It is unlikely that the EBV will change much with the addition of more progeny data.

increase in value, as it is to decrease.

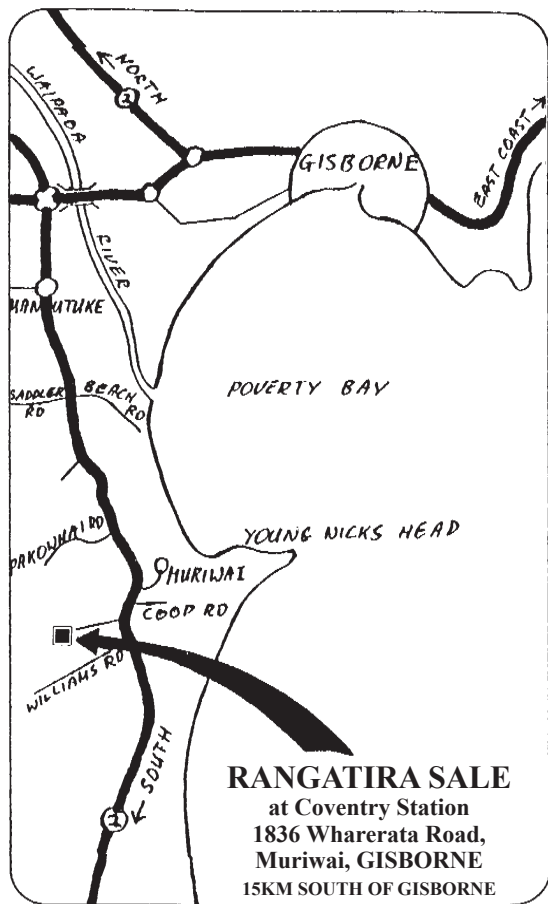

Accuracy values range from 0-99%. The following guide is given for interpreting accuracy:

As a rule, animals should be compared on EBVs regardless of accuracy. However, where two animals have similar EBVs the one with higher accuracy could be the safer choice, assuming other factors are equal.

For further information please contact NZ Angus or BREEDPLAN.

RANGATIRA ANGUS SALE LOCATION

RANGATIRA ANGUS STUD. Gisborne

All details and descriptions have been supplied by the Vendors and although every care has been taken to ensure accuracy, no responsibility is accepted for any omission or error that might be contained therein.

Under the Occupational Health and Safety Act 1992 we are required to advise people of possible hazards.

HAZARDS:

1. Cattle Movements
2. Work Vehicles
3. Cattle Yards, Slippery Surface
4. Woolshed Steps
5. Bull Sale Area

OSH: Every effort has been taken by the Vendors to ensure the safety of all visitors on Sale Day or any other day. However, we wish to advise that this is a farm run under normal management conditions and certain dangers exist in relation to livestock and their environment.

We ask visitors to take care to ensure their personal safety.
