# OUR HISTORY

---

Donald McKenzie was born in Fortrose, Scotland and along with his family emigrated to New Zealand in 1851 at just three-years-old. The family settled in the Hutt Valley where they lived for 10 years. They then moved to East Taratahi, near Carterton to farm a 829 acre property, which they did for 10 years. Then in 1873 he purchased 4926 acres, of which 700 acres was freehold and the balance leasehold, with rental paid to seven Maori.

Donald McKenzie, who settled at the Woodlands property, was a successful farmer and renowned for his sound judgement of stock, not just restricted to cattle but he was a well known breeder of light horses. Following this he began breeding pure-bred Herefords and his name became familiar in New Zealand show rings. This included a visit to the Sydney Royal Show with two animals which celebrated reasonable success. Donald was also president of the New Zealand Hereford Breeders' Association in 1916.

Donald was known as a forceful character, who often vehemently argued with those he had dealings with. He went on to buy large blocks of land. The first known as Puke Te, then Maungahina, which sons Jack and Jim became established on. Cavelands, a third property and on the boundary to Puke Te was bought much later.

Jim lived at Woodlands and rode his horse daily to Maungahina.

It was his father Donald, who established the Maungahina Hereford Stud in 1907. Foundation stock bred by the Stuckey Brothers, just north of Masterton and GC Wheeler of Halcombe (Manawatu) were the beginnings of the Amethyst, Graceful, Leonora and Princess families – still recognised today.

Then in 1912 the Minerva family was added from specifically selected animals from the Moore's Kai Iwi Stud. Shortly afterwards, in 1917, foundation sire Mansell Herdsman was imported from England and progeny from this sire produced many show champions with the Gay prefix. The live import of two cows from Canada occurred in 1929 and it's thought there have been at least 40 imports of Herefords since then.

Jim took over the stud in 1922 and that same year he bred the sire Gay Kansas that went on to win 14 championship awards.

After the death of James McKenzie in 1934 the stud was run by James (Jim) McKenzie, and in 1946 he started the 1st Bull Sale at Maungahina. James (Jim) died in 1970 and fourth generation Bruce McKenzie took over the stud. Handing over to Mark (5th generation) in 2006.

A polled herd was established in 1973 and a top polled sire bought from England in 1974. Then in 1982, the entire Wairongomai herd (Waio prefix) was bought. The Waio bloodlines are still identified in the herd today with a "W".

Maungahina cattle have a sound following with many loyal buyers, some properties regularly buying from 1913 and continuing today. Many are well known Wairarapa properties, including Mamaku, owned by the Williams family and the Matthews at Waiorongomai who have bought since 1914. Also the 4th generation of the McDonalds family.

Bruce and his son Mark continue the policy to raise and sell bulls in natural conditions and nurture the reputation the Maungahina name has commanded from its inception.

# AUCTIONEER'S NOTE

---

Maungahina consists of three properties; the home property 1460 acres of rolling limestone country in a low rainfall area situated 8km east of Masterton, predominantly the breeding property; Papariki 130 acres situated 2km east of Masterton which is all under K Line irrigation and is used as a finishing block; and following four droughts in a row we purchased 500 acres Northwest of Masterton in a high rain fall area which at present runs all our replacement stock and 700 in-lamb ewes.

It has always been the management's policy to raise and sell the Bulls under natural conditions, and owing to this policy, over the years Maungahina Bulls have proved to be outstanding in stamina and constitution.

## NOTICE TO PURCHASERS & CONDITIONS OF SALE

---

### TRANSFERS

The Vendor will action all NZ Hereford Association transfers, please provide details on instruction slip on sale day.

### T.B.

Herd status C10.

### SEMEN TESTED

Bulls are sold as being fit for natural service, however this does not guarantee their semen will freeze for artificial breeding. Additionally, no bulls have been health tested for export qualification purposes. All bulls are sold without guarantee that they will meet all health testing requirements for export.

### BVD

All bulls vaccinated twice prior to delivery.

### DELIVERY

Delivery will be anytime after the 15th June.

### GST

All lots are sold exclusive of GST.

### REBATE

A purchasing rebate of 6% will be paid to non-participating livestock companies and recognised independent livestock agents with approved credit facilities introducing and/or accompanying new buyers to the sale. Arrangements must be made with the auctioneer **prior to the sale and settlement made on the buyer's behalf within 14 days.**

### BUYERS REGISTRATION

A buyers number will operate at the sale, therefore it will be necessary for all prospective purchasers to register prior to the sale commencement.

## **FAULTS**

While all care and responsibility has been taken by the Vendors, Carrfields, and Pivot Design, no responsibility can be taken for any errors or omissions. All animals are sold in an as is where is condition, and any perceived faults cannot be readdressed by the above parties.

## **INSURANCE**

All care will be taken with the cattle awaiting delivery but they become the responsibility of the purchaser at the fall of the hammer. Therefore insurance is strongly advised and representatives will be in attendance.

## **INSPECTIONS**

Cattle will be available for inspection by contacting Carrfields, or the Vendors.

## **SELLING ORDER**

The Vendors reserve the right to alter the lot order. The highest bidder for any lot shall be the purchaser. Should any dispute arise, the dispute may be settled by the auctioneer at his option, or the lot may be put up again and re-sold.

## **HEALTH & SAFETY**

As land owners and hosts of the Maungahina bull sale it is our responsibility to make sure that every care is taken to ensure your safety while on our property.

## **DISCLAIMER**

The BREEDPLAN Estimated Breeding Values (EBVs) contained within this sale catalogue were compiled by the Agricultural Business Research Institute (ABRI) from the data supplied by breeders. Neither Hereford NZ, Speckle Park NZ nor ABRI oversee or audit the collection of this data

The woolshed in which you will share some lunch with us, register your interest in purchasing a bull and enjoy our hospitality after the sale is a multi hazard area with steps, ramps and balconies. The hayshed where the auction takes place is also an area where you will need to take care while sitting on hay bales. If you have been to our auctions before you will note that we have steel fencing around the auction ring and we ask that should you require to leave the sale whilst it is in progress that you first wait till the bull being sold has passed through and that the person on the gate is happy for you to leave.

We ask that you wear appropriate footwear as you will be walking in paddocks, on gravel, hay bales and should the weather be wet, these areas can become very muddy and slippery.

The toilets are located in the woolshed down stairs. These steps are very steep so please take care when descending them. The woolshed has its own Fire Extinguisher and First Aid Kit both located in the kitchen area of the shed. You will also note signs in the kitchen area indicating the name and location of the property should you require to call an ambulance and give directions.

As I am sure you will all appreciate we ask you to take every precaution while walking around the paddocks amongst the bulls whilst we will try to minimise any possible areas of hazard animals are unpredictable and have a mind of their own.

# FOREWORD

On behalf of the McKenzie family it gives me great pleasure to welcome you to our 78th on farm auction Bull Sale.

It has been a very tough twelve months for many farmers and producers throughout the East Coast. I feel for many in Northland, Auckland, Wairoa, Gisborne, Hawkes Bay and Tinui areas where Cyclone Gabrielle wreaked havoc and did the most damage. Here at Maungahina we didn't fair too bad.

As farmers we are resilient, but with climate change, government rules and regulations it's getting tougher - it's time for change. As farmers and seedstock producers we need to stand up, not only for our country but our family land and livestock as we are the best producers of grass-fed beef in the world and we need to secure this for the future of the next generations to come before it is too late.

In the Herefords this year we have been concentrating on extra carcase, muscle, yield and IMF. We have seen a massive difference in the past couple of years by using NJW Endure and Holyfield. I feel our cattle are definitely improving and the bulls are exhibiting the traits that we have been chasing, especially after seeing the scan data in March.

In the past few years we have had to use Genomics. I have seen a massive variation in birth weight in the Hereford breed since using Genomics. I sent ABRI an email on a couple of bulls that I was very frustrated about and this was their reply:

*"I'll look into these EBV queries with a high priority focus on the change in BW EBV. This isn't the first time we've seen large changes in the BW EBV once genomic information has been added – with changes being seen in both upward and downward directions (though we only hear from breeders when it's an upward change). There does appear to be something quite particular to the Hereford breed and to the birth weight trait, where genomics is allowing us to identify more diversity within the breed than pedigree and performance combined would show.*

*Please note that senior geneticist at AGBU, as well as my own team here in ABRI, are collaborating to better understand the SNP effects on genetic expression of birth weight in the Hereford breed."*

As a passionate breeder I feel it has taken stockmanship out of the equation and accuracy if this is their explanation.

This year's lineup of Speckle Park are mainly by Promise, Northern Star and Monty. We are lucky enough to have bred sires that are in the top of the breed at the moment and using Promise and Northern Star are an example of the quality coming through this year. We have also been concentrating on marbling (IMF) as you can see with the scan data. After 18 years in this breed, I am confident to say this breed is hard to beat for quality of carcase and consistency of marbling next to Wagyu, yet high yielding and early maturing. I have just come back from sales in Australia and it was very humbling to see a lot our genetics preforming well which bodes well for the future of the breed here in NZ.

We look forward to seeing our valued clients, new clients and friends to celebrate 116 years of breeding on the 8th of June.

*Mark McKenzie*

This sale will be hosted by bidr® (bidr.co.nz) as a HYBRID ON-FARM auction, with online bidding and a live-stream available for online purchasers.

All intending online purchasers must register with bidr® using an account held with one of the bidr® partner agencies in advance of the sale date.

The bidr® team is available to assist intending purchasers with signing up and registering – please call 0800 TO BIDR (0800 86 2437), or email [enquiries@bidr.co.nz](mailto:enquiries@bidr.co.nz) for assistance at any point.

**Alternatively, contact your local bidr® representative:**

# HEREFORD

# THE EBVs

BREEDPLAN EBVs and selection indexes remove the effects of non-genetic factors (e.g. feeding regimes, animal age) from what is seen and measured to provide the best measure of an animal’s genetic merit. BREEDPLAN information should always be used in conjunction with other selection criteria, including visual assessment.

## A BEST PRACTICE GUIDE TO SELECTING YOUR NEXT NEW ZEALAND HEREFORD SIRE

A BREEDPLAN Guide to Animal Selection allows you to select the best genetics for your herd in four easy steps:

1. Identify the **New Zealand Hereford selection index** of most relevance to you.
2. **Rank animals** using the chosen selection index.
3. Consider the individual EBVs of importance.
4. Consider other traits of importance (e.g. visual assessment).

The majority of these steps can be undertaken online, allowing you to generate a shortlist of bulls for potential purchase ahead of sale day. The searchable version of this catalogue can be found online at [www.herefords.co.nz](http://www.herefords.co.nz) or [www.pivotdesign.co.nz/catalogues](http://www.pivotdesign.co.nz/catalogues).

## NEW ZEALAND HEREFORD BREEDPLAN

New Zealand Herefords publishes the following BREEDPLAN EBVs and Selection Indexes. Please note that only EBVs from the same BREEDPLAN analysis can be directly compared.

Growth EBVs	Fertility & Birth EBVs	Carcase EBVs	Other EBVs	Selection indexes
Birth Weight	Scrotal Size	Carcase Weight	Docity	Hereford Prime
200 Day Growth	Days to Calving	Eye Muscle Area	Maternal Value	Beef Heifer
400 Day Growth	Gestation Length	Rib Fat		Dairy Beef
600 Day Growth	Calving Ease Direct	Rump Fat		Scan below for more detail
Milk (Maternal)	Calving Ease Daughters	Retail Beef Yield		
Mature Cow Weight		Intramuscular Fat		

More information, including EBV descriptions and how to use them, can be found in the **Using & Understanding BREEDPLAN EBVs** booklet.  
<https://breedplan.une.edu.au/media/dtqpdm34/using-and-understanding-breedplan-ebvs.pdf>

Details about the Hereford Selection indexes can be found at: <https://breedplan.une.edu.au/media/f1bh1b4n/using-new-zealand-hereford-selection-indexes.pdf>

**TRAITS OBSERVED** Genomics

Maungahina and Ngakouka purchased NZ semen rights in Endure. He has really stamped his mark in our herd leaving that extra carcase and muscle with some exceptional bulls in the sale. Endure has sired many high price stud bulls throughout the world and we can see why. Trait leader in 6 traits.

**TRAITS OBSERVED** GL 200WT 400WT 600WT SS FAT EMA IMF Genomics

Semen rights bought by this outcross sire in 2019. He had 130sqcm EMA at 19 months of age with a very good spread of Breed Plan data. We think highly of Holyfield with the way he is breeding, we have AI him to 50 cows. He has bred that extra carcase data we have been striving for in the Hereford breed and his females are exceptional.

## NOTES

# SPECKLE PARK

# SPECKLE PARK HISTORY

---

In 2008, Maungahina and Waiorongomai established Speckle Park NZ with 120 imported embryos and semen from Canada. After an extensive breeding programme we established a tremendous herd of registered Speckle Park cattle.

In 2013, we reached the herd numbers required to split the stock between Maungahina and Waiorongomai and went our own ways.

At present we are calving 120 cows in calf to purebred Speckle Park. In the last few years we have been able to identify the families that have been producing the genetics we are looking for and are mainly utilising our own genetics to get a better prediction on joining, concentrating on fertility, structural soundness and using the genetic SNP test for various genes.

With this year's bulls coming up for sale I have experimented by using high marbling cattle, crossed with MYO carriers to see if we can get yield as well as marbling, normally this doesn't go hand in hand. The result in some of these bulls proves the breed can.

Having yield and IMF together has to be the ultimate for eating experience. With the technology this breed has with carcase traits, the future looks bright but I'm very mindful if you breed too much for one trait, you lose another important trait.

Maungahina Legacy is breeding true to type and I endeavour to use him extensively throughout our herd as these are the type of cattle that we want to produce. Also, Kidmans Cove who has been the most valuable bull for us here selling 60,000 straws worldwide. The highest marbling Speckle Park bull in the breed and has stamped his mark as one of the top breeding sires in the world.

Our policy has always been year after year to better ourselves and this year looks no exception with a line of bulls that we are very proud of.

All Speckle Park have been fully DNA tested at GenomNZ with results published alongside each lot description.

## HIGHLIGHTS

---

- Six times Grand Champion at the Calgary Stampede Steer competition.
- 2015 Beef Spectacular Feedback Trial in Australia – Minnamurra Speckle Park/Angus steers entered four pens of five steers out of 95 teams winning 1st, 2nd and 3rd in the carcass competition. 1st in daily weight gain, 1st in profitability and saleable meat yield of 69% to 71%.
- In 2015 in New Zealand only one steer Speckle Park cross was entered in the Hoof & Hook competition at Beef Expo by the Collins family and won Top Heavy Weight Steer and Reserve overall. Also winning Champion Carcass at the Dannevirke Show with another Speckle Park steer. Sire of both steers was Eldarodo.
- In 2016 a world record price in Canada for a 2yr old Speckle Park bull \$60,000 for a half share bred by River Hill Farms. Also a 6 month old Speckle Park bull calf sold for \$8,500 at the Northland Fielddays vendor was Derek Hayward and bred by Maungahina
- Record price for Speckle Park 2yr bull \$24,000 at 2017 Maungahina 2yr bull sale.
- All breeds Australasian record price for F1 Speckle Park/Hereford heifers unjoined at 2017 Maungahina bull sale.
- Speckle Park embryos sold for a record price the 2nd highest price in the world at \$3,200 each

- At the 2018 June bull sale there was a NZ record price for 9 month Speckle Park heifers of \$27,000 & \$25,000 both sired by Kidmans Cove.
- We were very proud of setting a 2020 NZ record price for Speckle Park at \$35,000 purchased by JAD Speckle Park in Australia. We have many bulls in the sale by Legacy whose semen also sold in 2020 for a world breaking price of \$5,150 a straw.
- In 2021, we were awarded with a world record for embryos of \$6,500 sired by Maungahina Legacy (note same matings in this year sale at lot 56 and 57)
- In the Maungahina Bull Sale 2022:
  - Sold NZ record price of \$65,000 Maungahina Rising Star R286 to Minnamurra Pastoral Company
  - Sold Maungahina Rampage R301 for \$60,000 to syndicate Blueridge, Gin Gin, Riverbend, Arley farm and Totara Hill

## SPECKLE PARK BREED

---

- Speckle Park are carcass orientated yet maternal British breed (not a composite).
- Speckle Park was recognised as a pure breed in 2006 by Canadian Minister of Agriculture. They originated from a White Park, Teesdale Shorthorn/Angus over 60 years of breeding.
- A maternal polled breed, medium framed (mature cow 650-800kg and mature bull 1000-1200kg), early maturing and incredible yielding carcass with impressive weight gains targeting 18 months.
- Highly fertile and early puberty, great milkers with low to moderate birth weights. New born calves are up on their feet within minutes and suckling.
- Very high marbling (ultra sound scan data over the last eight years to back that up used at Maungahina).
- Three distinctive colour patterns; speckle, leopard and white with a small percentage of solid black.
- Excellent F1 cross over all breeds with impressive results. White Speckle Park bulls consistently colour mark, so you know what you are getting, especially over straight black cows.
- Hardy and healthy. They can withstand the harshest of cold winter in Canada and the heat of the summer in Australia
- Consistent high quality carcass. High marbling (IMF up to 7-8) and tenderness. Consistent saleable meat yield up to 71%.

# UNDERSTANDING SPECKLE PARK GENE TEST RESULTS

## GENERAL RESULTS

N	Non-Carrier	DNA analysis is consistent with the subject NOT carrying the mutation tested
C	Carrier	DNA analysis is consistent with the subject CARRYING the mutation tested
A	Affected	DNA analysis is consistent with the subject carrying two copies of the mutation tested
NR	No Result	

## COAT

ED	Homozygous Dominant Black
ED/e	Dominant Black/Recessive Red
ED/E+	Dominant Black/Wildtype
E+/e	Wildtype/Recessive Red
E+/E+	Homzygous Wildtype
e/e	Homozygous Recessive Red

## HORN/POLL

PcPc	Homozygous Poll (PP)	Predominately Polled (occassional scurs)
PcPf		
PfPf		
HPc	Heterozygous Poll (PH)	Polled or Scurred
HPf		
HH	Horned (HH)	Horned
NR	due failed test OR due to unresolved haplotype (combination of HornPoll markers fail to produce a valid result)	

**LEPTIN2FB** TT is the preferred leptin genotype associated with increased fat accumulation relative to CC genotypes. CT genotypes have one copy of the preferred leptin gene.

## LEPTIN

### 1. What is Leptin?

Leptin is a mammalian hormone with the primary function of decreasing appetite.

### 2. What genotype of Leptin is preferred?

Leptin TT

### 3. What are the benefits of Leptin TT cattle?

Leptin TT have an overall increased rate of fat accumulation compared to Leptin CC. For Leptin TT's, this mainly results in:

- Increased weaning weights
- Increased cow productive life due to increased body condition score
- Increased milk production
- Increased 12th rib back fat
- Impacts yield grade and marbling (quality grade)

# THE EBVs

BREEDPLAN EBVs remove the effects of non-genetic factors (e.g. feeding regimes, animal age) from what is seen and measured to provide the best measure of an animal's genetic merit. BREEDPLAN information should always be used in conjunction with other selection criteria, including visual assessment.

## A BEST PRACTICE GUIDE TO SELECTING YOUR NEXT SPECKLE PARK SIRE

A BREEDPLAN Guide to Interpreting EBVs helps producers understand how to assess and compare the genetic merit of animals. Each EBV is reported in the units in which the measurements are taken (e.g. Weight EBVs are reported in kilograms). Please note that *only EBVs produced in the same BREEDPLAN analysis can be directly compared.*

When interpreting BREEDPLAN EBVs, producers may:

- 1. Compare to the level of genetic merit within the current population.**  
Comparing against the current levels of genetic merit (*breed average* and/or *percentile bands*) allows you to understand where an animal ranks within the evaluated population. *EBV percentile graphs* can be found online for each animal and provide a visual representation of where an animal ranks for each trait.
- 2. Compare expected difference in progeny performance.**  
Comparing the expected difference in outcome if two (or more) different sires are used in a herd gives you an understanding of what these EBVs mean in real terms.
- 3. Consider EBV accuracy.**  
As a general rule, animals should be compared on EBVs regardless of accuracy. Most rising two year old bulls will have similar EBV accuracy levels; however, there may be some variation (particularly at multi-vendor sales) due to levels of performance recording and/or progeny if the bull was used as a yearling.

The searchable version of this catalogue can be found online here <https://www.specklepark.org/> or at [www.pivotdesign.co.nz/catalogues](http://www.pivotdesign.co.nz/catalogues).

## SPECKLE PARK BREEDPLAN

Speckle Park International publishes the following BREEDPLAN EBVs.

Growth EBVs	Fertility & Birth EBVs	Carcase EBVs
Birth Weight	Scrotal Size	Carcase Weight
200 Day Growth	Gestation Length	Eye Muscle Area
400 Day Growth		Rib Fat
600 Day Growth		Rump Fat
Milk (Maternal)		Retail Beef Yield
Mature Cow Weight		Intramuscular Fat

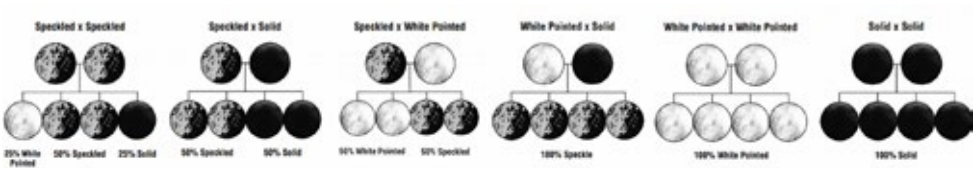

More information, including EBV descriptions and how to use them, can be found in the **Using & Understanding BREEDPLAN EBVs** booklet. Scan the QR code for more details

<https://breedplan.une.edu.au/media/dtqpdm34/using-and-understanding-breedplan-ebvs.pdf>

# COLOUR PATTERN GUIDE

Speckle Park cattle come in four distinct colour patterns: speckled, leopard, white with black points and solid black. The leopard and speckle pattern are genetically the same but display various degrees of spotting. Some Speckle Park cattle can produce red colour patterns if both parents carry the recessive red gene. It is important to understand how the Speckle Park colour patterns are inherited in order to achieve your breeding goals. Please see the colour guide below for a visual illustration.

Napoleon semen rights were purchased by Maungahina and Premier cattle co. We selected him for his maternal attributes. Low birth wt through to good growth and great carcase data with plenty of milk. We have seen enough to say his progeny are really easy keeping, super quite and his females are going to be very maternal with a tonne of milk. A bull we rate very highly and we will use him throughout our breeding program to get that consistency in the breed.

Rising Star was sold last year to Minnamurra (Australia) for a NZ record price of \$65,000 at our 2022 bull sale. We retained 200 straws and can use him on a few cows for looking after him here. We have a few heifers in calf by him coming up for sale in Lots 52, 53, 54 and 55 for NZ purchases only. I can't fault this bull, a standout in all aspects. Photo tells the story which was taken 2nd of May.

First of the Promise sons, he has been a standout in his peers and a bull I rate as one of the better bulls we have bred. This young bull will do a lot for the breed with that added scale and size, incredibly quiet, perfect structure with big testicles. Grand dam H37 is one of our top donors with 13 progeny to her name. A pedigree stacked with some of the great sires in the breed. Top 1% for the breed in growth, Mat cow Wt and scrotal.

Santiago is the last of the Cove bulls and I think one of his best. Bigger framed, smooth shoulder and impressive to view. We would have retained him if we didn't have so much of the dams bloodlines. Goes back to H37 again. Top 1% in the breed for IMF. If your are into marbled beef this is the bull.

# ELITE IN-CALF RISING 3 YEAR MAIDEN SPECKLE PARK HEIFERS

---

For the first time we are offering in-calf heifers. After 18 years in the breed, it is a pleasure to sell heifers that have pedigrees that are proven in our herd. It is an opportunity to purchase our top end genetics and mated to our very best bulls that we can offer.

All heifers were preg tested on the 6th of March by South Wairarapa Vets. Six heifers for sale were A.I. to various bulls on the 3rd of November, Lots 52, 53, 56, 57, 58 and 59 and then run with Maungahina Ring Master on the 18th of November. Over the past few year's we have ranged between 70% and 78% for A.I. conception. Four heifers Lots 50, 51, 54 and 55 were naturally mated.

## **NOTE:**

Anything sired by Rising Star is available to purchase by NZ breeders only.

TAKE THE MAIN ROAD TO CASTLEPOINT AT  
THE NORTH END OF MASTERTON  
(TURN OFF BY THE SERVICE STATION)

# 14 DAYS FREE COVER. NO BULL.

We want to ensure you get the very best cover on sale day and the best service every day after that. That's why we offer to insure your bull purchased at any **FMG Premier Bull Sale** for 14 days free\* from the fall of the hammer.

**Extend your cover.** All bulls purchased at auction up to \$50,000 can be insured for 6.5% of the purchase price on a 12-month policy. You can choose to extend your 14 days free cover on the Purchaser Instruction and Insurance Slip. For terms less than 12 months, different rates apply.

So talk to your FMG Rural Manager about FMG Premier Bull Sales Insurance.

\* Subject to standard underwriting criteria. Please note this is only a summary of FMG products and services and is subject to our specific product documentation. For full details, refer to the relevant policy wording at [fmg.co.nz/livestockpolicy](http://fmg.co.nz/livestockpolicy)

*We're here for the good of the country.*

**FMG**  
Advice & Insurance

# FMG Premier Bull Sale Insurance

## What is FMG Premier Bull Insurance?

FMG provides automatic insurance for all bulls auctioned at an FMG Premier Bull Sale up to the value of \$50,000 for 14 days at no cost to the purchaser. For any bull purchased over \$50,000 talk to an FMG representative.

## What is the length of cover?

You will automatically be insured for the specified bull for 14 days. You also have the option to extend the length of insurance to 12 months. Simply tick the “Extend your Premier Bull Insurance” option on the Purchaser Slip. The specified bull is then insured for the remaining period of 12 months at 6.5% of the purchase price. If you would like to discuss an alternative timeframe, please have a chat with your local FMG representative.

You don’t have to pay today, FMG will invoice you for this additional cover.

## What are the benefits?

✓ <i>Infertility</i>	Cover if your specified bull has to be euthanised due to permanent infertility caused by certain accidents, disease, or illness.
✓ <i>Theft or death</i>	We cover your specified bull for theft or death caused by certain accidents, disease, or illness (including while in transit anywhere in New Zealand).
✓ <i>Vet costs</i>	We cover up to \$500 for treatment of your specified bull to prevent death.

## What will FMG pay?

FMG will pay the fair market value of your specified bull, less any amount you receive for the sale of the carcass, up to the amount shown on the insurance certificate.
