Mt Cook Road, Fairlie, and
ONLINE at www.meadowslea.co.nz

100 YEARS
OF STUD BREEDING

The South Island hill country where Meadowslea stud cows run

**OFFERING: 77 HILL-BRED
R2-YEAR BULLS**

FERTILITY AND MATERNAL TRAITS the key to profitability in any herd!

Meadowslea stud cows winter on unimproved native tussock blocks without supplements being fed. This challenging environment tests the ability of the pregnant cow to maintain condition through periods of winter feed shortages. It is the energy stored in her rib fat levels that enable her to survive, thrive, and ultimately get back in calf and rebreed each year.

Days to calving is a crucial fertility trait that measures the number of days from when the bull is let into the mob until the cow calves. This identifies cow families that calve early every year. Those earlier calves will always be heavier at weaning, and selecting for short Days to Calving will reduce later born calves and allow higher conception rates in a shorter mating period.

"At Meadowslea we have always had some of the highest rib fat levels in the Angus breed. The importance of these fat levels is now recognised with our cattle now having some of the shortest days to calving EBVs in Australasia."

David Giddings

GOOD FAT COVER AND EASY-DOING ABILITY

Meadowslea stud 18mth in-calf heifers showing good fat coverings and ready to winter on the hill.

Meadowslea cows and calves come down off the hill for weaning.

A cow's condition and her ability to lay down fat in times of surplus, and to draw on that fat as an energy source in times of feed deficit is vitally important. This rib and rump fat is the cheapest and most efficient energy store on the farm, and will determine the ability of the herd to get back in-calf and rebreed early after a hard winter or difficult spring.

All Meadowslea yearling heifers are mated and any dries culled. After calving these heifers are run in mating mobs together with mixed age cows and expected to get back in calf early, rear a good calf off the tussock, and stay in good order. This is a tough ask for a first-calver, but this year that age-group scanned with a terrific 97% back in-calf rate!

A cow going into winter with good fat coverings carries an energy store on her back equivalent to approximately 2 bales of baleage.

The Meadowslea herd has natural rib and rump fat levels amongst the highest in the breed in Australasia – acknowledged as a key trait for fertility in the harsh environment.

Meadowslea 2025 Bull Sale

ON-LINE AND ON-FARM

State Highway 8, 23 Trotters Road, Fairlie
5km west of Fairlie

ON-LINE BIDDING OPENS

Paddock Inspection Invited at Anytime

Call David Giddings ph: 027 229 9760

HELMSMAN STYLE AUCTION

Wednesday 11th June - 3.00pm

Sale Format

The sale will be conducted as a Helmsman-style auction, meaning that all lots are for sale simultaneously. This is to allow for the participation of those in attendance, as well as those online. The sale will be hosted on our own **yourbid** platform and accessed through our website www.meadowslea.co.nz. Prior to the sale, all lots will be filmed and available for viewing up until sale day on the Meadowslea website.

Bulls are available for viewing in the paddock anytime – just call 0272299760 to arrange a time.

Registration for those in attendance will be at the on-farm office, where a copy of the conditions of sale will be posted.

Registration for those online will be through the Meadowslea website, where the conditions of sale will also be available.

Buyers will receive a buyer number as they register which will accompany each bid. Buyers registering online will receive a buyer number in their email which will automatically accompany each bid they place, whether they do so at home on their computer, or through their smart phone while in attendance. Those in attendance may also bid by writing on the supplied bidding cards and handing them in to the auctioneers. All live bids and all lots will be visible at all times, both online and on a big screen on-farm.

Online registration is available NOW and we encourage everyone to visit our website www.meadowslea.co.nz, to register, and then place practice bids on the demonstration lots on the auction page.

The Online Open Day videos will be released on our website and on Facebook on Friday 6th June at 7pm. This video will include footage of every bull in the catalogue with expert comments and will be available for viewing right up until the sale.

Online bidding will be open from 7pm on Friday June 6th until the conclusion of the sale.

On Sale Day, June 11th, the on-farm registration and bidding will open at 3pm.

Livestreaming with interactive viewing will commence at 12.30 pm with a walk through of all the pens with commentary from the vendors and genetic specialists. Requests to review particular cattle can be made through the comments section of the web-site chat room or by telephone or text to the vendors or stock agents in attendance. This will continue throughout until the conclusion of the sale.

A live screen on the website will show all lots alongside their current prices and the buyer number of the bidder who holds that lot. On-farm attendees will be able to view on a big screen on site. Bids will be displayed on a computer or smart phone screen in the following colours

Example:

\$2500 displayed in red denotes the vendor's reserve and indicates there has been no bid

\$3000 displayed in blue means an active bid has been received

\$3500 orange highlight indicates a new bid has been received within the last 2 minutes on this lot

\$3500 the holder of the leading bid will have the lot number highlighted in green on their computer or their smart phone. The bidding increment will be \$500

The sale will run until 5pm on June 11th. After this time the sale will conclude once there has been a period of at least 2 minutes without a bid being received on any lot. If another bid is placed on any lot during the 2-minute period, then time is extended and bids can be received on all lots for a further 2 minutes. This process will be repeated until a clear 2 minutes passes without any bids on any lot at which time the sale will conclude.

Final Time will be called clearly by the commentary team who will use their discretion to ensure all bidders are satisfied.

All updates will be posted on our website, as will an up-to-date version of this document.

Rebate purchasing Commission. PGG Wrightson and Hazlett will be in attendance to book the sale.

1. 6% rebate commission paid to the nominated buying company, provided the vendor is advised of the purchaser's intention to buy prior to the commencement of the on-farm sale, or before the purchaser commences bidding online.
2. 3% rebate commission paid to the nominated buying company when the vendor has NOT been advised of the purchaser's intention to buy prior to the commencement of the on-farm sale, or before the purchaser commences bidding online.

All prices are in \$NZD and GST exclusive. Full terms and conditions are available online at the Meadowslea website.

Disclaimer: The BREEDPLAN Estimated Breeding Values (EBVs) contained within this sale catalogue were compiled by the Agricultural Business Research Institute (ABRI) from the data supplied by breeders. Neither Angus NZ nor ABRI oversee or audit the collection of this data.

FOREWORD

Meadowslea Angus Stud was established in 1985 with the purchase of 6 capital stock heifers from the well-known Turihau Stud north of Gisborne. We have steadily expanded ever since to meet strong demand for bulls from the hill-country market we target – our belief is that an animal must first and foremost be suitable for the environment in which it is run.

With the lease and purchase of neighbouring properties over the last 10 years we have taken the opportunity to increase the stud cow numbers further, and this year mated a total of 730 stud females. The demand for our bulls has steadily increased with 170 bulls sold at auction in 2024. With 254 bull calves born in 2023 the bar has been very high to make the 2025 sale team and we this is definitely reflected in the quality of this catalogue.

Selection criteria are for easy fleshing, moderate framed cattle, with plenty of meat and adequate fat cover, that will shift and perform in the South Island hill-country. Sires used are all NZ bred with real emphasis placed on the maternal and fertility traits as well as structural soundness. Over the last 15 years our cows have grazed on Steve and Sue Kerr's neighbouring Berkley Downs property, on native tussock blocks to an altitude of over 2500 feet. Wintering without supplements through adverse conditions has further tested their hardiness and constitution, and clearly shown us the type that suits our country and even more importantly our clients' properties.

As you read this catalogue it will become clear that the animals that perform the best in our environment are of a similar type – strong rib fat levels drive our programme forward for two reasons. Rib fat is strongly linked to fertility, early puberty and the ability to calve early and re-breed early over a lifetime. Secondly, it is the energy store the females use to get through the feed shortages and extended stress periods all too common in this harsh environment. It is significant that the average rib fat EBV of all the bulls on offer is +2.3, ranking them in the top 25% for the breed in Australasia.

Very dry conditions in inland Canterbury through early 2024 served as a stark reminder of the type of cattle needed to perform in tough environments. It was the thick deep bodied easy doing cows and heifers with plenty of fat that held their condition and continued to milk and wean good calves – the old adage that it is the fat on the cows back that determines the weight of her calf has never been truer!

At Meadowslea all yearling heifers are mated. In 2023 we had 235 stud heifers born and we mated almost all as yearlings in 7 different mobs selected on pedigree, performance, and type. The result was a 97% conception rate and is a huge endorsement of the emphasis we place on the key fertility and maternal traits that are the main drivers of profitability in any beef herd. The performance of our young genetics is again leading the progress within the herd, with over 45% of the bulls in this catalogue either sired by yearling bulls or out of 2-year heifers.

The key fertility trait of Days to Calving measures how soon cows calve after the bull is introduced, with shorter values reflecting a higher likelihood of being in-calf in the first cycle. The bulls in this catalogue average -4.7 days, which is in the top 30% of the breed. The other important maternal traits of calving ease, scrotal size, and milk are also generally at very high levels throughout the catalogue. High-growth females do not work well in our hill-country environment and over time they have failed to perform and so have dropped out of the herd. Consequently, bulls with excessive high growth do not feature in this catalogue.

Our proven senior sires, Turihau Crump, Meadowslea F540, and Meat Machine G914, were all breed trait leaders for the fertility traits of calving ease, or short days to calving, and the mixes of these bloodlines within the bulls in this catalogue offer very exciting options for improving profitability in our clients' herds. This year we have some exciting new bloodlines coming through led by the \$81000 Kincardine Rainstorme who has 12 sons catalogued and offers a performance package unmatched in NZ. Our 2022 keeper bulls R818 and R646 have some thumping sons on offer with an extra dimension of thickness and muscle.

Meadowslea clients find our moderate-framed, early-maturing, easy-doing cattle prime up quickly, and are easily finished to grade and marbled at a young age enabling them to meet the very attractive market premiums now available for prime Angus beef.

With a total of 21 pieces of data now presented in catalogues, this can be a bewildering array of numbers for most commercial

FOREWORD CONTINUED

farmers and indeed stud breeders. We encourage clients to look primarily at the Self-Replacing Index in the first instance. We have found this to be a very useful tool for distilling this array of figures into a useful framework that reflects genuine profitability in NZ hill country conditions, and it is the primary metric we use for selecting and comparing cattle ourselves.

Meadowslea retain semen rights for in-herd use only on all bulls catalogued, unless by arrangement.

All bulls on offer will undergo Beef Class Structural Assessment inspection and the scores for the individual lots will be published online and be available in hard copy on sale day.

All Meadowslea bulls come with a 3-year guarantee, and we stand behind them 100%. All bulls on offer have passed a structural assessment inspection by Bill Austin, and the scores for the individual lots are published in the back of the catalogue.

Stud Transfers - Any bulls sold for stud transfer will be at a minimum price of \$15,000.

Bulls are available for viewing any-time pre-sale – just call 027 229 9760 to make a time that suits.

We look forward to seeing you at Meadowslea, or joining us online, at 3pm on **Wednesday June 11th 2024**.

Regards,

David Giddings

SELF REPLACING INDEX **+\$137**

Comments: Purchased in May 2022 for \$81,000, Rainstorme is one of the most exciting sires we have used at Meadowslea. He ticks all the boxes for efficient beef production on hill country and has generated widespread interest from stud and commercial breeders in both NZ and Australia, with semen and embryo sales of over \$100,000 recorded to date. Rainstorme has the unusual combination of data that is backed up by viewing the bull himself. His massive EMA is visible in his exceptional loin and his easy doing ability with his strong fats is very evident. His wonderful smooth shoulder confirms his calving ease trait leader status and his massive scrotal and milk figures are also industry trait leading. He now has over 300 recorded progeny across 23 stud herds in NZ and Australia, as well as a similar number of progeny in top commercial herds throughout NZ. His exceptional data set has barely altered since he was purchased as a 2yr old, confirming he is adding real performance gains wherever he has been used. The first of his yearling sons were a real feature of our spring bull sale in October 2024 and we used 7 sons as yearlings to mate stud heifers and cows. We have retained one exceptional son U270 for stud duties and are very excited to offer our clients 12 sons in this sale.

MEADOWSLEA MARK 100 YEARS OF STUD BREEDING

2025 marks a significant milestone for the Giddings family of Fairlie as they celebrate a century of breeding Romney sheep on the same Meadowslea property.

It was 1925 when Gilbert Giddings then still a teenager took the train to Gore and purchased 40 stud Romney ewes. He wasn't old enough to have them registered in his own name and so the first Meadowslea Romneys were registered in his mother's name – Mrs Sarah Giddings.

The stud today is run by Gilbert's son David and his son George. George has a 1-year-old son named Gilbert all living on the Meadowslea property.

The Meadowslea Stud sheep flock currently consists of around 3000 recorded ewes run over 4 properties. As well as the base Meadowslea Romney flock, the operation now includes worm resistant Kiki South Romneys, Romdales, Texel x Romney, Perendale x Texel x Romney, Kelso x K Romney, as well as a black face Terminator breed. All the breeds are run entirely unshepherded with high survival, and low input easy care, the cornerstone of the breeding programme.

MEADOWSLEA ANGUS HISTORY

In 1986 David Giddings met Hamish Williams from Turihaua Angus at a Romney stud dispersal sale in Otago. Hamish was establishing a Romney stud at the time, and the conversation that followed led to a reciprocal agreement to exchange capital stock young females over a 3 year period. In 1987 Hamish travelled to Meadowslea and picked 20 in lamb stud Romney 2th ewes, and David visited Turihaua and selected 6 in calf capital stock 2yr heifers. These foundation females were wonderful traditional NZ bloodlines, at a time when the bigger framed USA genetics were becoming increasingly popular with Angus breeders in NZ.

David says at the time he had no idea these were some of the only capital stock females to ever be sold from Turihaua and the Giddings family are eternally grateful to the Williams family for the incredible opportunity. From those original 18 heifers, Meadowslea Angus has grown to be mating 720 stud females annually, as well as holding NZ's biggest annual female production sale. This has all been possible due to the incredible fertility and structural soundness of the Turihaua herd, which was an industry leader in mating 2yr heifers back in 1987.

David says while there have been massive changes in breeding and performance over all those years, some things haven't changed at all, with the fundamentals of structural soundness, strong constitution, and fertility, as relevant today as they were back in 1925.

EBVS EXPLAINED

ANGUSNZ EBV'S AND SELECTION INDEXES

EBVs and Selection Indexes remove the effects of non-genetic factors (e.g. feeding regimes, animal age) to provide the best measure of an animal's genetic merit.

To ensure the accuracy of EBV and Index data, AngusNZ combine with Angus Australia to create a reference population known as the TransTasman Angus Cattle Evaluation (TACE).

By using TACE – along with visual and structural appraisal – will assist in creating a balanced phenotypical and genotypical breeding outcome.

SELECTING YOUR NEXT ANGUSNZ SIRE

1. Consider your individual EBVs of importance
2. Consider other traits of importance (e.g. visual assessment)
3. Identify the AngusNZ selection index of most relevance to your breeding programme
4. Rank animals using the chosen Selection Index.

The majority of these steps can be undertaken online at www.angusnz.com, allowing you to generate a shortlist of bulls ahead of sale day. Alternatively Beef & Lamb Genetics have developed a new tool to make it easier to find the best bulls for your farming operation. Using a series of buttons and sliders, you refine your breeding objectives, then click a button and nProve generates a list of bulls that best fit. It's free to use, there's no need to register and there's also helpful tips to get started.

Try it out at
www.nprove.nz

AngusNZ Individual EBV's – Please note: Only EBVs from the same TACE analysis can be directly compared.

GROWTH

200, 400 & 600 Day Weight EBVs (kg) – Larger (or more positive) Weight EBVs are expected to produce progeny that grow faster to 200, 400 & 600 days of age, respectively. The Weight EBV of particular importance will depend on the target market e.g. vealer (200 D), yearling (400 D) or heavy steer (600 D).

Mature Cow Weight (kg) – Larger (or more positive) MCW EBVs are expected to produce daughters with higher mature cow weights and increased feed requirements. More moderate MCW EBVs are generally more favourable in self replacing or maternal production systems.

Milk (kg) – Higher (or more positive) Milk EBVs are expected to produce daughters with more maternal ability leading to higher 200 day weights in their progeny. Selection for moderate Milk EBVs may be preferable in harsher environments as cows with higher Milk EBVs can have impaired fertility and decreased survival under such conditions.

FERTILITY & BIRTH

Calving Ease Direct (%) – Higher (or more positive) CEDir EBVs indicate 2 year old heifers will have less difficulty calving this sire's progeny.

Calving Ease Daughters (%) – Higher (or more positive) CEDtr EBVs indicate easier calving of this sire's daughters at 2 years.

Gestation Length (days) – Lower (or more negative) GL EBVs are expected to produce progeny with shorter gestation lengths. Such progeny are also expected to be easier calving.

Birth Weight (kg) – Lower, less positive BWt EBVs are expected to produce progeny that are lighter at birth, with an associated lower risk of calving difficulty. This EBV is particularly important when selecting sires where there is an increased risk of calving difficulty (e.g. heifers, cross-breeding).

Days to Calving (days) – Lower (or more negative) DTC EBVs are expected to produce daughters that are more fertile and have a shorter interval date to calving.

Scrotal Size (cm) – Larger (or more positive) SS EBVs indicate better semen quality and quantity. Daughters are expected to be more fertile and reach puberty at an earlier age.

CARCASE

Carcase Weight (kg) – Bulls with larger (or more positive) CWt EBVs are expected to produce progeny with heavier carcase weights.

Eye Muscle Area (sq. cm) – Bulls with a higher (or more positive) EMA EBV are expected to produce progeny with better muscling.

Rib and Rump Fat EBVs (mm) – Bulls with higher (or more positive) Rib & Rump Fat EBVs are expected to produce fatter progeny, relative to carcase weight. The desire for more or less fat will depend on the finishing ability of your animals.

Retail Beef Yield (%) – Bulls with higher (or more positive) RBY EBVs are expected to produce progeny with higher yielding carcasses.

Intramuscular Fat (%) – Higher (or more positive) IMF EBVs are expected to produce progeny with more marbling and better grading scores (e.g. MSA).

OTHER EBVS

Docility (%) – Higher (or more positive) DOC EBVs are expected to produce more progeny with acceptable temperament.

AngusNZ Selection Indexes

AngusNZ currently has three different selection indexes. These are:

1. Self Replacing Index
2. AngusPure Index; and
3. Heifer/Dairy Terminal Index

Each selection index is reported in units of net profitability/cow mated (\$), and relates to a commercial herd using Angus bulls. Each index is focused on efficient beef production, including maternal traits where appropriate.

NEW SALE SYSTEM CELEBRATES ITS 5TH BIRTHDAY

Yourbid, the online Helmsman auction system developed by Meadowslea Genetics of Fairlie, celebrated it's 5th birthday at the studs recent in-calf female sale on April 30th.

The stud holds 7 on-farm sales a year across their sheep and Angus cattle breeding operations, including the annual in-calf sale in early May. In 2020, this date fell within NZ's Level 3 Covid lockdown, during which no crowds or gatherings were permitted, making an outcry auction impossible.

With feed supplies tight and meat processing capacity limited, deferring the sale really wasn't an option either, meaning the only way forward was to hold it online. After looking at the various options available, the Meadowslea team decided to design their own from the ground up.

After running helmsman sales for many years for ram sales and in-lamb ewe sales previously, David and son George Giddings could see how an online helmsman sale would work very well for stud stock. They were able to provide a webdesigning friend with a specific brief, and a week or so later Yourbid came into being. The sale was very strong, with spirited bidding from around New Zealand, despite no buyers being in attendance at all.

Since that first sale in 2020, Meadowslea have run 30 successful sales for their own stock, as well as a number of sales for other stud breeders in NZ and Scotland. The system has proven very popular with stud-stock buyers, giving them the extra time to consider their purchases carefully, and the option of buying in choice order rather than lot number order.

As well as the In-calf sale, Meadowslea annually run 2 bull sales, an online semen sale, and 3 ram sales on Yourbid. Yourbid has been used very successfully for studstock sales in Scotland, and the Giddings family have received enquiry from breeders keen to use it from around New Zealand as well as in Australia, France, the US and as far afield as Romania. 3 other ram breeding operations have used it in New Zealand this summer, with a number of bull sales confirmed for the upcoming season and many more interested in switching to it over the next few years.

Online helmsman-style auction

Yourbid works as a Helmsman-style auction - meaning all lots are offered for sale simultaneously.

Other online livestock sales platforms in New Zealand use the traditional sequential auction model, whereby each lot is sold one at a time, one after the other. Yourbid uses the "Helmsman" style of auction. This means that all the lots on the sale are open for bidding at the same time, which is helpful for both buyers and sellers, particularly when conducted online. Bidding is also kept open over a period of several days, rather than the minute or so per lot of a conventional auction.

A key difference of this platform compared to any other the developers have seen is the bidding screen which shows the current prices of all lots simultaneously. Reserve prices are shown in red for a start, this changes to blue once the first bid is received, and the buyer number of the current leading bidder is displayed. New bids are highlighted in orange for a minute. Buyers who are logged in on their own device see the lots they hold highlighted in green. This gives an instant overview of the auction so anyone can see on which lots the activity and interest is, making it easy to establish their relative market values.

All online models have some level of time delay between when events happen on-site and when they are seen by remote buyers. For a traditional sequential auction a delay of 15-20 seconds can be very significant, when each animal might only be in the ring for 90 seconds or so. By keeping the entire auction open for a longer period of time this problem is mitigated significantly. It also means sales will not be affected significantly by any temporary technological glitches.

Giving buyers time

Selecting seedstock is a major decision for sheep and beef farmers, and one which will have ramifications on their operations for years to come. People need time to gather and process information to make decisions. This is even more important when buying remotely, when information gathering is more difficult and takes time – meaning remote buyers are significantly disadvantaged at an online sequential auction. The Yourbid system gives buyers this extra time, and

by integrating the bidding on the website alongside the online catalogue, videos of each lot and a live commentary, this information is readily available to buyers. Rather than turning up on a given day and viewing all the animals in that tight time-frame, buyers can go through the catalogue, view the videos, make selections, and bid at their leisure from home over the period of several days the sale is open.

Bidding order of preference

Another advantage of a Helmsman-style auction is that it allows buyers to bid on stock in the order of their preference, rather than the catalogue order. For instance, as a buyer you might be interested in lot 8 and lot 12. At a traditional auction, lot 8 comes into the ring and isn't selling for too much, however lot 12 is your first preference so you decide to wait for that animal to come into the ring. Lot 12 comes in, sells for too much money, and you can't go back and bid on lot 8 because that animal is sold. Under the Helmsman system buyers can chop and change throughout the bidding. Meadowslea have analysed the bidding data for the sales they have run already, and it is obvious that a lot of buyers will bid on a certain lot to a particular level, then change to another lot, then perhaps go back to the first, or move onto a third animal they like. Some buyers bid on as many as 8 different animals to get the one they wanted – in a conventional auction they would have missed out completely or ended up with one that wasn't in their top-10 at all. By running the auction over a longer period, those who missed out on their first choice were able to go back through the videos and catalogue (or back through the pens for those who were actually onsite) and pick another animal they were satisfied with.

Integrating on-farm and online bidding

Integration of on-farm and on-line bids is crucial to the success of a platform like this. This system works by having large TVs on-farm displaying the bidding screen. Buyers on-site can bid through their smart phones, and those bids are displayed in real time. Some buyers will still prefer to attend on-farm and bid using pieces of paper as per a traditional Helmsman sale – they write their buyer number, their lot number, and the bid price on a piece of paper and hand it in – they are able to enter this directly into the online system so it shows up on-screen in real-time as well.

Engaging with potential buyers

By providing a live-chat on the platform, potential buyers are able to ask questions, request another closer view or more information about a particular lot, and even send through jokes and one-liners. Online videos and the livestreamed commentary are produced through Facebook Live. All this makes for a much more engaging and entertaining environment for the buyers, compared to what many feel are the sterile and austere atmospheres of some of the other established online platforms.

Yourbid invite enquiry from breeders, agents and commercial farmers interested in using the platform, and envisage it becoming an independent platform able to be used by all industry players.

Comments: Purchased in May 2022 for \$81,000, Rainstorme is one of the most exciting sires we have used at Meadowslea. He ticks all the boxes for efficient beef production on hill country and has generated widespread interest from stud and commercial breeders in both NZ and Australia, with semen and embryo sales of over \$100,000 recorded to date. Rainstorme has the unusual combination of data that is backed up by viewing the bull himself. His massive EMA is visible in his exceptional loin and his easy doing ability with his strong fats is very evident. His wonderful smooth shoulder confirms his calving ease trait leader status and his massive scrotal and milk figures are also industry trait leading. He now has over 300 recorded progeny across 23 stud herds in NZ and Australia, as well as a similar number of progeny in top commercial herds throughout NZ. His exceptional data set has barely altered since he was purchased as a 2yr old, confirming he is adding real performance gains wherever he has been used. The first of his yearling sons were a real feature of our spring bull sale in October 2024 and we used 7 sons as yearlings to mate stud heifers and cows. We have retained one exceptional son U270 for stud duties and are very excited to offer our clients 12 sons in this sale.

Comments: Purchased at the 2021 Turihaua Bull sale, Jupiter impressed us with his superb structural soundness, scoring almost perfect 5s in the Beefclass scoring system. He is a deep bodied, moderate framed bull with exceptional muscle, and this is supported with a strong EMA figure in the top 10% for the breed. He carries the important fertility trait of short days to calving ranking in the top 2% for the breed and the easy doing fats we rate so highly in the hill-country. All this combined with a very moderate mature cow weight generates a SRI index in the top 1% for the breed. The first of his R2-year progeny in 2024 were outstanding with 5 sons used as yearlings and one retained for stud duties. This year's line-up of 5 sons are all thick deep square types, that are super sound and are ideal for the hardest country.

Comments: Recognised as one of NZ's most influential and long-lasting senior sires of recent times. He has over 450 progeny in 21 herds in both NZ and Australia and is a trait leader for the important fertility EBV of short days to caving at -9. days. Traditional NZ Angus hill country type with proven industry leading fertility. His grandson Meadowslea Mountain Man was the highest selling 2-year-old bull in NZ in 2020 and sons and grandsons have sold for up to \$92,000 at studs across the country. His daughters and granddaughters are the top breeding females in our herd and are proving exceptionally fertile and productive in our hill country, resulting in him now achieving a self-replacing index in the top 10% for the breed. He has a major influence in this sale and you will note he shows through in the pedigrees of many of the good bulls on offer. His progeny, when crossed with our own F540 bloodline, consistently produce quality offspring that is always well sought after.

Comments: F540 continues to have a huge influence on our herd with exceptional longevity to 13 years old. He has been used successfully in many breeding programmes with over 300 progeny in 12 herds in NZ and Australia. Deep, thick, easy-doing sire with exceptional production figures for hill country. He has strong maternal and fertility traits and is a trait leader for both short gestation and milk, while his short days-to-calving, rib and rump fats, and IMF all feature in the top 10% for the breed. His daughters are outstanding in the herd weaning thumping calves while maintaining their condition all year round, a real testament to his easy doing traits. He features strongly in this catalogue with numerous daughters and granddaughters producing quality bulls throughout the sale. The F540 X Crump bloodline is legendary and includes the record breaking \$92000 Meadowslea Mountain Man.

SELF REPLACING INDEX **+\$155**

Comments: Retained in the stud in 2018, M564 is a son of F540 and out of our record-breaking cow G1000, who was sold to Ballanee Angus Australia in our 2021 female sale for \$16,000. She was sired by the high-performing Glanworth 08-16, and she scanned with the biggest EMA of her year group with an EBV figure of +13.3. We selected M564 to use as a yearling after he had scanned with the biggest EMA ever recorded in the stud and he has consistently passed this trait on to over 100 progeny scanned in 14 stud herds throughout NZ. His data set is very impressive for profitable efficient beef production in NZ hill-country. He has, short gestation with moderate birthweight followed by strong early growth to 400 days, then levelling off to give the moderate efficient cow size needed in our environment. He has exceptional carcass traits that are hard to find in traditional NZ bred bulls with both EMA and IMF ranking in the top 10%, while his easy doing fats sit in the top 1%. All this data combines to generate a self-replacing index in the top 5% for the breed in NZ. M564 has the first of his young daughters with sons in the catalogue plus a very good son at lot 45.

YOU NEED THE BEST. TO LOOK AFTER THE BEST.

When it comes to the transport of stud livestock you can't go past Downlands Deer and Studstock.

During the past 30 years, we have pioneered the way in studstock transportation with purpose built trucks, calm expert livestock handlers, efficient nationwide transport routing and now with visual tracking from pick up to delivery.

Comments: We retained P700 in 2020 after using him over stud heifers as a yearling. He was one of many outstanding sons of L226 and we selected him for his strong fertility traits and compact moderate frame packed full of meat. He excels in all the traits we value in the hill country with calving ease, low birth weight and efficient moderate cow size. He has exceptional maternal and fertility traits with milk, scrotal size, and rib and rump fats all in the top 10% for the breed. His progeny always scan terrifically well for IMF ranking him in the top 1% for the breed with an EBV of +4.6 His mother is a lovely moderate framed 11-year-old cow offered at lot 105 in our 2022 sale. The first of his sons were the feature of our 2023 bull sale including the top price to Mt Possession Angus and another to Glen R Angus, all with the same exceptional IMF figures. We used a couple of cracking sons at lots 27 and 28.

BRAVEHEART OF STERN ^{SV}
MEADOWSLEA 45

Comments: P674 was sold in our 2020 bull sale for \$18,000 to Dovedale. His full brother N141 was the top price bull in the 2019 sale sold to Waimara Angus at \$22,000. We retained semen in P674 recognising that he was double-bred to Braveheart and had inherited his very strong EMA. With Meat Machine as the sire of the dam he is bred to be thick, deep, and square and he is certainly passing this on to all his progeny. He has a great spread of figures and is in that sweet spot we like for moderate frame, fertile, easy doing cattle in hill country. He has the efficient moderate cow size figure we aim for below his 400 day, and this is recognised with a self-replacing index in the top 5% for the breed. He is breeding exceptionally well with a son at lot 1 in the 2024 bull sale selling at \$20000 to Glen R Angus, and T234 being retained in the stud. Check out his top son at lot 50.

Comments: Q178 was our top keeper in 2021 and we rate him as one of the best bulls we have ever bred. He is a son of Rangatira 16209 who bred an outstanding line of bulls for us in the 2021 and 2023 Bull Sales, with sons selling to \$32,000. He displays exceptional depth of body, with a powerful head, bone, and very good feet. He has a superb hindquarter and wonderful temperament. He has a good balance of figures for hill-country with strong fertility, recording short days to calving figures in the top 10% for the breed. This bull has attracted much interest with strong semen sales to some of the leading studs in NZ as well as sales to Australia and USA. He has some terrific deep bodied sons on offer again this year including a standout we used as a yearling at lot 16.

Meadowslea Q178 - outstanding herd sire retained in the stud in 2021.

Comments: Quartz Q250 was also retained in 2021. He is a son of our high-performing carcass merit sire M564 and a grandson of our record price cow G1000 who was sold in our 2021 Female Sale to Australia. His mother is a 10-year-old Crump granddaughter who was sold in our 2024 female sale. Q250 is a lovely, well-balanced, moderate-framed bull who ticks a lot of boxes for hill country production. He has calving ease with low birthweight and moderate efficient mature cow size. His maternal and fertility traits are very strong with his scrotal size, milk and fats all ranking in the top 10% for the breed. He has inherited the good EMA coming through from his record-priced grandmother G1000 who's EMA is now in the top 1% in NZ at +13.3. Quartz also has IMF in the top 10% for the breed. A very sound bull with a great pedigree behind him. Quartz picked up an injury in the 2022 mating and recovered to cover mate late in the season. He has only one son on offer being the last calf born in 2023 and he is a ripper at lot 61. Expect more top sons next year!

Comments: We purchased Rebel at the final Rangatira Bull Sale in 2021 for \$35,000. For us he was the standout bull in the catalogue, both for his pedigree and his moderate, sound, deep body type. His sire is the high performing Turiroa Maverick, who is a son of our own Turihaua Crump. His dam has bred exceptionally well, with a full brother to Rebel selling in the 2020 Rangatira bull sale for \$35,000. Rebel has all the quality and soundness attributes that the Rangatira herd was known for.

Comments: Purchased at the 2021 Turihaua bull sale, Tornado is a lovely moderate framed, wonderfully sound, traditional Turihaua type of bull. He has exceptional structural soundness, and wonderful feet and legs to give longevity of production. He exhibits strong muscle with a deep flank and very good hindquarter. We see a lot of similarity to Turihaua Crump in this bull and the first of his 2yr sons were very impressive in our 2024 bull sale. Tornado has 3 very deep bodied impressive sons on offer.

Comments: R818 was the outstanding Meat Machine son from the 2020 calf drop and was sold in our 2022 bull sale to Jade Park Angus in Australia for \$23,500. R818 has remained at Meadowslea and we are very fortunate to be able to use him. He has developed tremendously, and his depth and thickness have impressed all who have seen him. R818 has strong caving ease and low birthweight coming from the Meat Machine bloodline. He displays a very deep, wide hindquarter and a wonderful clean shoulder with great balance and outlook. R818 has the exceptional easy doing ability we value so strongly in the hill-country, with good rib and rump fats and the volume and capacity to handle the hardest conditions. The first of his 2yr sons from his yearling mating were very impressive in the 2024 bull sale, including T106 sold to Turihaia Angus. This year he has another very strong line-up of sons from his 2yr old mating who all display tremendous volume and capacity with very good feet and bone. We have also retained a very good son for stud duties.

Comments: R646 was retained in 2022 after being used as a yearling. His sire Meadowslea M429 was sold to Red Oak stud for \$18,000 and was a son of the \$100,000 bull Rangatira 13-38. The dam of M429 is the great old cow G922, who is also the dam of Meadowslea N166, and was sold to Ballanee Angus, Australia for \$9,300. The dam of R646 is a good cow by KayJay Freedom I36 going back to Braveheart. R646 has tremendous volume and thickness with very strong growth and good fertility traits. He has an exceptional muscle pattern with superb width across the loin and hind-quarter. His wonderful easy doing ability is clear to see with rib and rump fats in the top 10% for the breed. He has 8 outstanding sons on offer who consistently display his exceptional width of loin with powerful growth with the strong head and bone we need in the hill-country.

Comments: S402 was lot 3 in our 2023 sale and was sold to Corey and Lindsay Roulston, Switzers Hill at \$17500 with very strong interest from Australia. We used him as a yearling and he has bred very well for us. He has a very strong pedigree being by Turiroa Panther and going back to Crump on both sides of the pedigree with Reality in there as well. His dam is a top breeding 10yr old cow who is also the dam of lot 2 in this catalogue. She featured at lot 145 in our recent female sale selling to The Wolds Station at \$3500. S402 is leaving strong growth with great length and tremendous Rib and Rump fats at the very top of the breed. He has 3 very good sons on offer.

Comments: First of the much-anticipated Rainstorme sons to kick off of our 2025 catalogue- and you won't be disappointed! Incredible growth with real scale about this bull. He has the strong scrotal size all the Rainstorme sons have with some IMF as well. Goes back to Crump, Goldwyn, and the great old A330 cow who shows up in so many top pedigrees, including Meadowslea Mountain Man and Sudeley Viking! Powerful bull with wonderful foot and bone. Top performance all the way through - he was second heaviest at weaning out of 230 bull calves, the 4th heaviest at 400 days, and is now likely to be the heaviest bull we've ever presented for sale - a real prospect!

Comments: More horsepower here with this extremely grunty son of Turihaua Delta who we used in the AI programme. Proven longevity in the pedigree - dam has had 13 calves in her lifetime including sons sold to Waewaepa at \$12,000 and others to Mt Gerald, Lilybank, and Glen Islay. Grand-dam also had 13 calves including a heifer sold to Piko Burn Angus and a top bull to Rocky Point Station. There is some doubt about his birthweight - dam calved in the crop and he never had his actual birthweight recorded. Tremendous head and bone with a wonderful hindquarter, powerful growth with the 3rd heaviest weaning weight, exceptional fertility, and massive IMF! Another strong, powerful impact sire who must be a real prospect.

Comments: This Rainstorme x Crump cross is proving to be every bit as good as we had hoped and was the mate we had in mind when we purchased Rainstorme. We are retaining U270 who is bred the same way. U447 is a beautifully balanced bull with calving ease, moderate birthweight, good growth and a very strong milk figure. Plenty of muscle, good fats, and IMF coming through from Crump. Grand-dam did the 10 years before being sold to Wilkins Farming. This is a classic Rainstorme with a lovely topline, strong hindquarter, depth through the flank, quality foot and bone.

Comments: Rainstorme again, with a pedigree featuring a second shot of Reality on the bottom line through Matauri Outlier. Plenty of growth, with the great scrotal we always get from Rainstorme, and a good muscle scan. Grand-dam was a good Crump cow who bred a top bull sold to Palmside Station. Upstanding bull with great style and outlook about him - potential here as well!

Comments: Fantastic heifer mating figures here with Rainstorme's incredible calving ease and low birthweight coming to the fore, with a second shot of Reality well back in the dam side once again. Very well balanced with clean shoulders and a top hindquarter. Grand-dam N217 produced a top Crump son sold to Reece Whitelock in 2023. Plenty of IMF on the page too, coming through from Goldwyn 17, with positive fats and top fertility data.

Comments: A very impressive son of the R818 bull sold to Jade Park Angus in Australia, and out of a 12-year-old cow. Grand-dam bred very well including L275, sold to Mt Mable Angus, and top bulls to Craigmore Station and Rocky Point Station, plus retained keeper H119. Goes back to C844, who was sold to Sudeley Angus where he became sire-of-dam of Sudeley Viking. Great outlook and growth, strong coat, a very well-made bull and very sound structurally. Worth a close look!

Comments: First of an impressive lineup of R646 sons - you will see plenty of these in this catalogue! This first one is out of a great old F540 cow which looks to be a good cross. She was sold at 10 years old in the 2024 female sale, while the grand dam bred 3 sale bulls. Plenty of growth - he was 5th heaviest at weaning and outright heaviest bull at 600 days. Also has exceptional easy doing fats, good IMF, short days to calving, and possibly the best hindquarter in the sale - a very impressive bull!

Comments: A very good traditional pedigree makes this bull a brother to the \$92,500 Meadowslea Mountain Man - by N166 and out of an F540 cow who was sold to Matukituki Station in our 2025 Female Sale for \$3,800, and who bred stud bull R644. U355 has a stacked pedigree going back to Acheiver of Kenhardt and with a second shot of the great Hingaia 469 on the dam side, as well as two of our greatest ever cows, A330 and A300 in there twice! Powerfully built bull with wonderful head, bone, and outlook. Thick and deep with a terrific hindquarter. Quality through and through and worthy of close inspection.

Comments: Here is a very powerful bull by Turihaua Jupiter who consistently leaves these thick, powerful bulls with great head and bone. Mother goes back to Goldwyn and is also the grandmother of lot 9. Outstanding short days to calving reflects fertility and when combined with a nice moderate mature cow size wins him a good SRI Index. Plenty of growth and muscle, an upstanding and easy doing type, thick, deep and square. Lots of grunt here!

Comments: Beautifully sound, square son of Turihaua Tornado, going back to the Meat Machine bloodline. Real thickness and depth with clean shoulders and a wonderful hindquarter. Big EMA scan with sharp actual IMF as well. Out of a cow by L252, a bull who was sold to Reece Whitelock and whose daughters have bred exceptionally well. She produced a bull sold to Alen Jay last year and a top bull S582 sold to Melrose Station in 2023, plus another top bull sold to David Hobson the year before. Superb foot and bone structure - a very sound moderate bull and the signature Tornado type. Actual birthweight of 41kg was midrange.

Comments: We start the mob of bulls used as yearlings with a signature Meadowslea bull from one of our leading bloodlines, sired by Q178 and out of one of the top Lazarus cows on the place. Grand-dam was an F540 daughter who did her 10 years and was sold in the 2024 female sale, she is also the mother of lot 8 in this sale. A standout bull all the way, U202 was our first pick to use as a yearling and has bounced back incredibly well. He was used over adult stud cows ahead of his sire. Moderate birthweight followed by powerful growth, easy doing fats and very good IMF to boot! Wonderful depth and thickness, hugely powerful hindquarter, and the quality head and jaw we expect from the Rangatira bloodlines. Real potential here!

Comments: Another very thick, deep bull used as a yearling. By Meadowslea R646 who as you're seeing throughout this catalogue is leaving tremendous thickness and depth. A great maternal pedigree, the L226 bloodline being one of our leading cow families, with Crump featuring twice further back. Dam bred a bull sold to Picton Park Angus in 2021. Strong growth with the exceptional width of loin R646 leaves, good fats, and a good index. Exceptional hindquarter, real strength of head and bone. Used over stud heifers and out until late in the piece - has bounced back very well!

Comments: Great pedigree here, by Rainstorme and out of a 2-year-old heifer by N166 - sire of Mountain Man - this cross has worked as well as we'd hoped! Also goes back to Meat Machine and Red Oak 378 so some real background. Wonderful calving ease, low birthweight followed by good growth, good fertility, milk, and very strong fats - a real easy-doing type. This is all reflected in a very strong self-replacing index. A classy, compact, easy fleshing bull with a powerful backend and great temperament. Used over stud heifers and must rate as another top prospect!

Comments: Rainstorme again with another powerful pedigree - once more out of a grand-daughter of Crump - how we planned to mate Rainstorme when we bought him. Goes back to G895, one of the embryo cows sold to Ballanee Angus in Australia in 2021. Exceptional calving ease, low birthweight, and powerful growth, with strong milk, fertility, muscle, and fats, all combining for a strong SRI Index. Some real scope and scale about this fellow - he will become a truly impressive 3-year-old! Used to follow up the AI in a mob of 80 yearling stud heifers - he would have been busy!

Comments: Another very good Rainstorme son that was a standout as a yearling and selected to mate over heifers. Incredible heifer mating figures with exceptional calving ease, very low birthweight with strong growth - second heaviest at 400 days - ample milk, big scrotal size, and easy doing fats. A lovely moderate framed, quiet, classic Rainstorme type. Out of a 2-year-old heifer by N210, a top bull used as a yearling and sold to Robin and Will Jamieson. U102 goes back to Braveheart, Crump, and old Glanworth 0816. Grand-dam L187 featured in our recent Female Sale selling to The Wolds at \$3,100. U102 was used to backup AI in a mob of 80 R2 stud heifers.

Comments: Another really typey Rainstorme son - a very correct, compact bull. Another bull out of a 2-year heifer, with F540, Meat Machine, and Crump all featuring in the pedigree this time. Incredible heifer mating numbers with terrific calving ease and low birthweight, heaps of muscle, great fats, short days to calving and scrotal size which all generate a good SRI index. Classy bull with balance and style. Used over stud heifers in the second cycle.

Comments: Another of these exceptional heifer-mating Rainstorme sons with all the performance of his father and beautiful clean shoulders. Calving ease, very low birthweight, great scrotal size, exceptional muscle and IMF as well. Was one of the heaviest bulls at 400 days, good going for a 2-year-old heifer's calf! Is a Lazarus grandson so has a second shot of Reality from the dam side, with Meat Machine and Crump further along the bottom line. Used over stud heifers in the second cycle. An exceptional data set!

Comments: Continuing a run of bulls used over stud heifers, there are some really thick, deep bodied bulls in this next pen. This is a son of S116, sold at lot 1 to Island Bay in our 2023 bull sale, and yet another bull bred out of a 2-year heifer. This fellow has low birthweight and calving ease, with good muscle, fats, and impressive IMF coming from the P700 bloodline. Grandmother bred a good heifer recently sold in the female sale and a bull sold to Peak Hill in 2021. He displays a wonderful hindquarter and is a good thick, deep, and square type. Used over stud heifers in the second cycle.

Comments: A son of S402, the top bull sold to Corey Roulston at lot 3 in 2023, and again out of a 2-year heifer. Goes back to the \$100,000 Rangatira 13-38 on the dam side and great-grand-dam L154 was just sold to Matukituki Station for \$3,800 in our 2025 female sale - she was also the mother of R644 sold to Rocky Point Station. Moderate birthweight, strong fertility, muscle, and plenty of fat on the page. U125 is a good thick type with a wonderful hindquarter. Deep through the flank, wide across the loin with good length and top to him. Used to backup AI in stud heifers.

Comments: First of the P700 sons and selected to mate stud heifers in the first cycle. Terrific pedigree - goes back to Meat Machine and Hingaia 469 and the grand-dam is Australian export cow F801, dam of N257 sold to Umbrella Range Angus for \$22,000. Wonderful calving ease, super low birthweight, he scanned with a lot of fat and plenty of meat, plus IMF as well. Adjusted for weight he had the biggest actual EMA of any bull. All his data combines for a top self-replacing index - a top heifer mating option with carcass merit to boot.

Comments: A very similar P700 son used to mate stud heifers alongside the previous lot, and out of another Meat Machine cow who bred top bulls sold to Peak Hill last year and to David Stodart in 2022. Terrific calving ease, short gestation and low birthweight give watertight heifer mating figures, and he went on to be 5th heaviest at 400 days! Has exceptional fertility, is really easy doing with huge fats, and has some IMF as well. A very sharp package!

Comments: A son of N166, sire of Meadowslea Mountain Man. Out of one of our very good L226 daughters who are proving themselves to be great cows. Grand-dam bred a good bull sold to Stoneleigh Run last year and another sale bull the year before. Pedigree features a couple of shots of Crump, F540, and the great A300 cow twice. Used as a yearling to mate stud cows, he has strong growth, good fertility, huge EMA, positive fats, and a massive self-replacing index!

Meadowslea Stud cows and calves come off the hill for weaning

Meadowslea Stud cows after weaning - job done for another year!

BRED FOR THE HILL COUNTRY

The development of the Meadowslea hill - country type has been the result of 25 years of selecting animals that perform the best in our hill country environment. Cows that can winter easily on the hill without supplements, stay in good order, calve easily and get back in calf early every year for 10 years has been the focus of our breeding programme. By putting pressure on cows to winter on native hill blocks it quickly became apparent that some animals could manage well in this environment and would easily get back in calf the next year, while those that struggled would be too light going to the bull, and either calve later each year, or come through dry.

Those that were dry or were not holding their condition well enough were removed from the stud herd, while the “easy-doing” types thrived and passed their genetics on to the next generation. It was clear that it was the cows with good fat covers going in to the winter that were consistently performing the best in our environment.

Ultrasound scanning is performed on all yearling bulls in early spring, and on the heifers in the autumn. For us, the most important data is the rib and rump fat cover measurement - we have found these strongly correlate with those easy doing characteristics, and we now put a lot of emphasis on this when selecting bulls to use and heifers to retain. This is reflected in Meadowslea having some of the highest fat EBVs on the Trans Tasman Angus Cattle Evaluation.

These great positive fat EBVs in the Meadowslea herd have come about simply by selecting animals that suit the hill country environment.

The all-important fertility trait of Short Days to Calving measures how quickly cows calve from the time the bull is introduced and is a major influence of beef herd profitability. The more negative the better.

Graph showing the short days to calving EBV average for the Meadowslea herd compared to the NZ average, with major progress made by selecting for early maturing, fertile cattle.

Graph showing improvement in fat EBVs at Meadowslea while running the herd on hill country, compared with Australasian average. From TransTasman Angus Cattle Evaluation, April 2022.

■ Meadowslea herd
● Australasian herd average

The average rib fat EBVs of the bulls in this catalogue is +2.3 ranking in the top 25% of the breed in NZ.

Meadowslea Stud 2yr Heifers and their calves on high tussock.

Rib fats drive profitability in beef cattle

Graph showing direct association between rib fat levels on R2yr heifers in February 2023, and the weaning weights of their calves in early March 2024 during an extremely dry period.

Graph showing association between rib fat EBV and 2023 calving date for the entire Meadowslea R2yr heifers. Those females with strong rib fat levels are able to hold their condition through the long winter on our hill country and consistently get in calf earlier.

This is also key evidence of the importance of testing stud cattle in genuine commercial conditions, as these signals might be less obvious without a long period of limited feed availability.

The Meadowslea hill-country type

Visual appraisal is still very important for selecting cattle to perform in hill - country

MASCULINE TRAITS - A strong head and jaw and thick neck indicate high levels of libido, testosterone and reproduction efficiency

NECK LENGTH - A thicker necked animal matures and reaches puberty earlier and has more libido

A longer neck indicates a higher maintenance animal that is slower to reach puberty and re-breed

HEART GIRTH - Large heart girth is an indicator of vigor and easy keeping ability

Small heart girth animals are more susceptible to stress, are higher maintenance and do not perform well on tussock

RIB FAT - Strong rib fat covers are the essential energy store for adverse conditions.

They indicate easy-doing and finishing ability and are directly related to increased fertility in both heifers and cows.

STRUCTURAL SOUNDNESS, FEET AND BONE - High country cattle cover large distances over rugged terrain so a strong skeleton is essential

HIDE - a good thick skin and coat is essential in the cold harsh environment

FLANK - Deep flanked animals are easier keeping, have more meat in the rump and have more maternal and reproductive efficiency

Higher flanked animals tend to be flighty, are higher maintenance and take longer to finish on grass

SCROTAL SIZE - Larger scrotal size at 12 months indicates daughters will reach puberty earlier, be more fertile, and re-breed early every year.

Comments: Son of the \$106,000 Kaharau Olympic and out of a cow by Goldwyn 017 which ensures plenty of marbling! Dam also bred S184, used in the stud as a yearling and sold to Queensbury Ridges at \$11,000. Moderate birthweight, good calving ease, strong growth, exceptional fertility, positive fats and outstanding IMF in the top 5% makes for an impressive package! Deep body, strong hindquarter and a nice moderate frame with strong foot and bone structure.

Comments: A nice P700 son double bred to L226 and back to Goldwyn 17 again ensuring lots of IMF on the page. Dam bred a heifer transferred to Westfield Angus in 2022. Tremendous data with great calving ease, low birthweight, and strong growth too. Good scrotal size, with more than 3 times the NZ average for IMF so a top package for heifer mating with carcass data to boot. Good well-balanced bull with a strong hindquarter, nice and sound.

Comments: Son of the Rockley bull we bought as a yearling to mate heifers and he is another really strong heifer mating option, again out of a 2-year-old heifer. Sire of dam Q295 was a Meat Machine son sold to McFadzean Angus. Good calving ease, low birthweight, exceptional fertility with plenty of fat and IMF as well. Another good, sound, well balanced bull with a very strong hindquarter and tremendous scrotal size.

Comments: A grandson of Turihaua Rhinestone out of a cow going back to Meat Machine and Crump. Dam bred S513, a top bull sold at lot 30 to Stu Millar, Peak Hill, in 2023 for \$14,000, and sire of dam L252 was sold to Reece Whitelock where he did very well indeed. Good strong growth again with decent scrotal, positive fats, and a very good actual IMF. Thick, deep, square and compact, a good sound type.

Comments: A son of the S402 bull that was sold for \$17500 to Roulstons at Switzers hill and going back to Meat Machine and Crump on the dam side. Well fleshed with massive easy doing ability – look at those fats! Good IMF as well and a top self-replacing index. A heifer’s calf that grew out to be 4th heaviest at 400 days! A nice, soft, easy fleshing bull with a very good hindquarter.

Comments: Here is a moderate framed bull suitable for heifers with exceptional marbling. Sire Q118 was sold to Rocky Point Station and has left exceptional IMF. Out of another of these L226 cows and has two shots of Goldwyn and Crump, so the marbling is right through the pedigree. Calving ease and low birthweight, strong scrotal and milk, easy-doing fats and a remarkable IMF figure in the top 1% for the breed!

Comments: A moderate framed son of Jupiter, back to Meat Machine and F540. Sire of dam L252 was the bull sold to Reece Whitelock where he bred well. Grand-dam H107 is the mother of Mountain Man, she was herself sold to Glengyle Angus in 2022. Good strong growth, incredible short days to calving, strong carcass data with EMA, fats, and IMF – another handy bull to add some data and his self-replacing index certainly reflects that! This bull had a bit of a hiding over summer– you can see his cauliflower ear – but is on the up and up now!

Comments: We start another paddock group of really powerful bulls here, all by Q178, and displaying his trademark strength and thickness. U419 is out of a cow by L226, that cow family are proving to be some of the best females in the herd. Grand-dam bred a bull sold to Grampians Station at \$10,000 and another we used as a yearling and went to Scott Hussey. Really strong growth and an incredible easy doing type with plenty of fat. Scanned really well for IMF at twice the NZ average. Deep, thick, square type with tremendous spring of rib, a massive hindquarter, and powerful head and bone. Worth a really good look!

Comments: Another very similar type of bull, out of an F540 cow this time. Grand-dam H104 was the mother of stud bulls L226 and M452. Good strong growth, very good fertility traits with short days to calving and big scrotal. Another very easy doing type who scanned strongly for rib and rump fats. Shows all the power, depth of body, and fullness in the hindquarter Q178 is renowned for.

Comments: Superb thickness in this next group of three, leading with this absolute brick! Deep, thick, square and one of the best backends you'll encounter. Sire S116 was sold at lot 1 to Island Bay in 2023 and has bred really true to type. Out of a 2-year heifer and grew out to be 4th heaviest bull at 400 days! Low birthweight with big fats and the top actual IMF of the year! Wonderful width, spring of rib, depth of flank with great head and bone – has to be a prospect!

Comments: A son of M564 with incredible width across the loin, an exceptional hindquarter, strong head, foot, and bone. Another very powerfully built bull with a lot to offer. These M564s are known for their width of muscle along the spine, going back to the great G1000 cow sold to Australia, and U244 goes back to Meat Machine and Braveheart on the dam side as well. Grand-dam bred a good bull sold to Sam Barton in 2024. Scanned well for fat and a good actual IMF.

Comments: Here is a really good quality bull out of a 12-year-old cow going back to Highlander of Stern, and sired by N166, the sire of Mountain Man. Wonderful presence and style about him with a beautiful, lush coat and skin, he displays good muscle, easy doing fats, and perfect balance with the classic N166 pull up. A bull to have a good look at – we rate him!

Comments: Another son of S402, the Panther son used as a yearling and sold to Corey Roulston for \$17500. U236 is out of a 2-year heifer going back to Meat Machine, Crump, and Goldwyn. Lots of growth, strong milk, with good fertility and incredible easy doing fats coming through from both sides of the pedigree ensuring his self-replacing index is right up there. Scanned with the second highest actual IMF of all the bulls offered. Great length, good top, lovely skin and coat, balance and style and a bull we looked very closely at using ourselves.

Comments: Another bull from our leading young genetics -out of a 2-year heifer and by a yearling bull. Sire S116 was lot 1 in our 2023 sale and sold to Mark Hutchison at Island Bay. U233 has a great pedigree featuring Lazarus, Meat Machine and F540. Strong growth, top fertility once again, and real easy doing fats. Terrific width and thickness across the top with that really strong hindquarter S116 has left. Quality head and bone as you'd expect with the Rangatira prefix in the background.

Comments: Here is a bull we really rate. Sire is R818, the bull sold to Jade Park Angus in Australia who has bred some top-quality sons including a keeper this year. Back to Braveheart and Crump on the dam side. Wonderful balance and style about this fellow, great topline, well set up on his feet and legs with lovely skin and coat. Good strong growth, the exceptional fats we get from the Meat Machine bloodline, and a really sound prospect.

Comments: Here is another bull to take special note of. Very well bred – sire P674 was double-bred to Braveheart and sold to Dovedale at \$17000 in 2020. We retained semen in in P674, and he bred our lot 1 top priced bull in the 2024 sale. The dam of U207 is N166 who bred Mountain Man. Top cow A330 is in the background too – she is the great grand-dam of Mountain Man and Sudeley Viking. Grandmother gave us 9 calves including a top bull sold to Craig Thompson at \$12,000, and great-grand-dam bred P556, stud bull sold to Helmsdale Angus at \$18,500. U207 has a tremendous skin and coat to him, a beautiful free flowing gait with balance and style. Scanned with plenty of muscle and lots of fat once again. This is a very good bull!

Comments: Another top pedigree once again. Mother M542 is the dam of Stud sire R646, who has bred such a lineup of bulls in this sale and goes back to Braveheart. Sire was a top son of Turiahua Rhinestone, going back to Rhino – so there is plenty of grunt from that side too! Strong growth once again with big scrotal size and plenty of muscle, a wonderful top, and massive hindquarter. Thick, moderate framed bull and a very solid type. Should have a big future!

Comments: A very well-bred bull here as well – the only bull calf born at Meadowslea in 2023 by the record priced \$92000 Mountain Man - who has cracking sons for sale this year at KayJay and Kaharau Angus. U217 goes back to the Meat Machine bloodline on the dam side. Some real scope and scale about this fellow which is reflected in his growth figures. Good fertility, very strong muscle with one of the best scanning to weight ratios in the sale, very good in his rib and rump fats with IMF to boot! A real prospect, upstanding, stylish, and really on the move. One to watch!

Comments: Another of these R818 sons which are impressive throughout the catalogue with their soundness, thickness and balance. As with all this bloodline U477 is easy doing with good strong fats, a big hindquarter, nice moderate cow size, and real width across the top. Goes back to the Waiterenui bull who left very good feet and structure, with some Crump in the pedigree as well. A good sound prospect.

Comments: A 2-year-heifers calf and a son of the yearling Rockley bull we purchased who was selected for his industry leading fertility traits. U372 has the terrific scrotal and short days to calving figures as you'd expect from his sire. He goes back to Meat Machine on the dam side and features the great old cow A300 in his pedigree. Grand-dam bred bulls sold to Reece Whitelock, Mt Hutt Station, Ardmore, Belmont Station, and Gray Menlove. U372 scanned with good IMF and easy doing fats, and his data set combines for a top self-replacing index. Good strong bull with a meaty hindquarter.

Comments: Outcross bloodline here – a son of Kaharau Cobra, and out of a cow with Meat Machine and Crump in her pedigree so he can’t help but be thick. We were lucky enough to get some Cobra semen after our old Rangatira bull was injured and we ended up using some in the AI programme that year. A heifer mating option with low birthweight and calving ease, he scanned with good muscle, has lots of fat, and has the head and bone we’d expect of his pedigree.

Comments: A well-bred bull here with an impressive pedigree, being a son of R646 who has left such strength all through the catalogue, and out of the mother of the equally powerful stud sire Q178! She has bred well every year with bulls sold to Kydell Downs and Greg Hand. Thick, deep, and square with tremendous head and bone. Good muscle, easy doing fats, and IMF as well. A really solid compact bull with a great hindquarter who will suit the hardest hill.

Comments: A son of R572, our lot 1 bull sold to Red Oak in 2022, where he is sire of some of their top bulls this year, and out of a cow by the very sound Ratanui Nugget who bred a bull sold to Carrick Station last year. Lazarus, Crump, and the \$100,000 Rangatira 13-38 are in the background too. Very well put together and a great heifer mating option with that low birthweight and clean shoulders. His actual IMF scan was very good, he has plenty of fat and short days to calving. Very easy doing type with balance and style.

Comments: A son of S402, the top lot 3 bull sold to Corey Roulston 2 years ago, and out of a 2-year-old heifer by Q158 who was also sold to Corey Roulston! Goes further back to Meat Machine, F540, Crump, and Reality. Another easy doing bull with a strong hindquarter with some IMF – a good heifer mating option with potential to use over cows as well.

Comments: Very impressive bull to lead off this last paddock of bulls. The last calf born in 2023 after his mother returned to AI, he has done incredibly well to grow out this well! The only son in this sale by Quartz Q250 for whom we've had real interest in semen sales both in NZ and Australia – Quartz picked up an injury that year but came right late in the season so his progeny were all very late born. Dam is a young cow going back to Crump, Rangatira 13-38, Red Oak 378 and Meat Machine, her first calf was used in the stud as a yearling. Great depth of hindquarter, strong head and bone and stands on immaculate feet and legs. U62 is a great package for heifer or cow mating. Plenty of muscle, very strong fats, and scanned with one of the top actual IMF numbers. One to have a very close look at – real potential here – we've looked very closely at keeping him.

Comments: Another very good bull to follow, by Jupiter out of a 10-year-old cow who bred a good bull to Robin and Will Jamieson in 2021. Grandmother bred a good bull sold to Corey Roulston at lot 4 in 2019. Very solid, thick type once again. Beautifully structured, sound bull with good muscle, fats, and a lovely presence and outlook about him. These Jupiter sons all have incredible thickness and top back ends. Another bull to look closely at!

Comments: A son of S160, our keeper bull from 2 years ago, who is leaving terrific structure and soundness. Out of a 2-year-old heifer by Panther and back to Turihaua Loyalty, so a couple of shots of the well-known Chisum bull. Another thick, deep bodied bull ideally suited for heifer mating with low birthweight and good calving ease. Terrific easy doing attributes with big fats and a top back end!

Comments: Another of these deep, solid R646 sons that are such a feature of this book. Out of a Meat Machine cow so he is bred to be super thick. Dam bred good bulls sold to Greg Hand and Mt Gerald, meanwhile grand-dam H117 is the mother of stud sires P700 and R650 and was herself sold to Albert Hill Angus as a 10-year-old. Very easy doing once again with plenty of fat and a very sharp self-replacing index. A lovely topline, plenty of length, and that R646 width across the loin - a strong solid bull.

Comments: Typical of these R646 sons, another bull with real thickness and width across the loin. Goes back to Meat Machine again and with low birthweight and strong calving ease. U397 is a very good heifer mating option with terrific calving ease and more than enough growth to use over cows as well. Dam bred a good bull sold to Eskvale Station last year. Plenty of muscle and strong positive fats, a real thick, chunky type.

Comments: A son of R650 who was used to follow up the AI programme. Nice balance of figures with good fertility, very strong fats, and one of the best IMF figures in the sale coming through from the old Goldwyn 17 bull, and ranking U465in the top 5% for marbling in NZ. Reality, Infinity and Crumble all appear further back in the dam side. Mother bred a bull sold to Ray Walker last year. Powerfully built sire with good head and bone, a strong hindquarter, and some scale about him.

Comments: Here is another of these very consistent Jupiter sons. Great bone and feet, thick, deep, square type with a very strong backend. Data shows the best rib and rump fats around with a very good IMF scan as well. Goes back to Goldwyn, F540 and Crump. Mother is the dam of our 2024 keeper bull T234 and U450 has certainly got the same grunt about him! Grand-dam L293 was the mother of Q223 – he was used as a yearling here where he bred keeper bull S160, as well as stud bulls sold to Tarangower and Turiroa Angus, and was then sold to Riverlands J Angus where he has bred very well too. A lot to like about this bull!

Comments: We have a trio of Lazarus descendants up next. U393 is an upstanding, moderate framed bull out of a 2-year heifer going back to Meat Machine, Highlander, and Crump. Grand-dam is the mother of lot 68 in this book. Very strong fertility traits and a moderate mature cow weight generate one of the best self-replacing indexes around! Plenty of muscle with a scan, relative to his weight, one of the very best in the catalogue. He has strong fats with a big scrotal EBV too. An easy doing, compact style of bull that will breed efficient hill-country cows.

Comments: Another very similar bull – clean shouldered and upstanding. This time out of a cow going back to Crump who was sold as a 10-year-old in April 2025. A lovely heifer mating option with nice low birthweight, very short days to calving and scanned with plenty of IMF at twice breed average, which all generates another good index. Actual EMA scan relative to weight was also very good.

Comments: Here is a nice P700 son to lead this pen of moderate, chunky types. Out of a cow going back to the \$32,000 Woodbank 7017. Grand-dam bred a stud bull sold to Waimara Angus and another to Giles Foley. Some nice data here for heifer mating with strong calving ease and low birthweight. Has exceptional scrotal size, and scanned very well for EMA, fats, and IMF. As you'd expect with his terrific spread of data his indexes are very strong.

Comments: Good solid, thick type here with very strong growth. Very late born and has caught up remarkably well. Sire was an L226 son we used as a yearling to follow up AI, who was later sold to The Muzzle at lot 6 last year. Grand-dam bred a bull sold to Stoneleigh Run. Good fertility traits, muscle, fats, and growth with moderate cow weight generate good index! A well rounded, smooth bodied bull.

Comments: Another thick, chunky bull here going back to Rhinestone and out of a cow by the high performance M564, going back to the great NZ record priced cow G1000. Dam's first calf sold to Eskvale Station last year. Good growth and strong fertility with very good days to calving and good scrotal, scanned well for muscle and very well for IMF and fats. Another good, solid, chunky type.

Comments: Nicely fleshed, well-balanced bull here with a clean shoulder. Out of an R2yr heifer once again and has Lazarus and Rhino in the background going further back to KayJay Crampon and Goldwyn 17. Strong growth, good fertility traits and another handy index. Very clean, well-balanced bull with a strong hindquarter.

Comments: Another Lazarus grandson to finish on, this time out of a cow being back to Meat Machine and with two shots of Crump in the pedigree. Grandmother K701 bred a stud bull sold to Okaka Angus as well as a bull top sold to Luke Scragg last year, did the full 10 years, and was transferred to Alan Fielding in the female sale last year. Once again he has very impressive fertility traits and easy doing fats. A nice upstanding bull with presence about him.

BEEF CLASS STRUCTURAL ASSESSMENT

HOW TO DO BEEFCLASS STRUCTURAL ASSESSMENTS

Docility: 1 is Ideal (Docile), 3 is less ideal (restless) and 5 is aggressive. (Scores of 1 and 2 are preferred).

- 4 and 6 show slight variation from ideal but this includes most animals. Any animal scoring 4 and 6 would be acceptable in any breeding program.

- 3 and 7 shows greater variation, but would be acceptable in most commercial breeding programs, but seed stock producers should be wary.
- 2 and 8 are low scoring animals and should be looked at closely before purchasing.
- 1 and 9 should not be catalogued and are considered culls.

TRAIT	KEY	SCORING RANGE

THE REMARKABULLS.

In 2024 we sought your prize-worthy bulls to hero them front and centre – they really fill the frame.

These beautiful bulls are worth their weight and more, requiring strong cover on sale day, and solid service every day after that.

That's why we offer existing FMG clients (with an active policy), **14 days free cover** for bulls purchased at any FMG Premier Bull Sale up to the value of \$50,000 per bull, on completion of an Insurance Form.*

Cover can be extended beyond the initial 14 days free cover for the remaining period of 12 months at 7.6% of the purchase price (rates differ for shorter policy periods).

To find out more, talk to your FMG rep, visit fmg.co.nz/contact-us or call us on 0800 366 466.

Left to right: CHAROLAIS - Trudy and AJ McIntyre;
SOUTH DEVON - Richard and Denise Van Asch;
HEREFORD - Jason Hill; ANGUS - Sherson Family (Brian and Sharon Sherson, their son Rob and his wife Tracy).

We're here for the good of the country.

*Offer subject to Livestock Policy terms and exclusions, and underwriting criteria.

FMG
Advice & Insurance

FMG Premier Bull Sale Insurance Form

What is FMG Premier Bull Insurance?

On receiving a completed FMG Premier Bull Sale Insurance form, FMG provides its existing FMG clients with an active policy 14 days free insurance for bulls purchased up to \$50,000. For bulls purchased over \$50,000, please contact an FMG representative.

What is the length of cover?

Your specified bull(s) will be insured for 14 days once you have fully completed this form and it's received by an FMG representative. If you would like a longer period of cover, simply tick the Cover extension box below to extend your Premier Bull Insurance to 12 months. The specified bull(s) is then insured for the next 12 months at **7.6%** of the purchase price.

FMG will invoice you for this additional cover.

What are the benefits?

✓ Infertility	Cover if your specified bull has to be euthanised due to permanent infertility caused by certain accidents, disease, injury, or illness.
✓ Theft or death	Cover for your specified bull for theft or death caused by certain accidents, disease, injury, or illness (including while in transit anywhere in New Zealand).
✓ Vet costs	Cover up to \$500 for treatment of your specified bull to prevent death.

What will FMG pay?

FMG will pay the fair market value of your specified bull, less any amount you receive for the sale of the carcass, up to the amount shown on the insurance certificate.

Apply

Please fill in this form as soon as you have purchased your new bull(s) and hand it to your FMG representative. This form **MUST** be fully completed and you have to be an existing FMG client with an active policy to be eligible for the 14 days free Premier Bull Sale Insurance.
